OXADIAZOLE, THIADIAZOLE AND TRIAZOLE DERIVATIVES
AND COMBINATORIAL LIBRARIES THEREOF

BACKGROUND OF THE INVENTION

FIELD OF THE INVENTION

The present invention relates generally to the synthesis of compounds comprising heterocyclic rings. In one specific embodiment, the invention provides novel oxadiazoles as well as novel combinatorial libraries comprised of such compounds.

BACKGROUND INFORMATION

The process of discovering new therapeutically active compounds for a given indication involves the screening of all compounds from available compound collections. From the compounds tested one or more structure(s) is selected as a promising lead. A large number of related analogs are then synthesized in order to develop a structure-activity relationship and select one or more optimal compounds. With traditional "one-at-a-time" synthesis and biological testing of analogs, this optimization process is long and labor intensive. Adding significant numbers of new structures to the compound collections used in the initial screening step of the discovery and optimization process cannot be accomplished with traditional "one-at-a-time" synthesis methods, except over a time frame of years or even decades. Faster methods are needed that allow for the preparation of up to thousands of related compounds in a matter of days or a few weeks. This need is particularly evident when it comes to synthesizing more complex compounds, such as oxadiazoles.

50

55

Solid-phase techniques for the synthesis of peptides have been extensively developed and combinatorial libraries of peptides have been generated with great success. During the past four years there has been substantial development of chemically synthesized combinatorial libraries (SCLs) made up of peptides. The preparation and use of synthetic peptide combinatorial libraries has been described, for example, by Houghten et al., (*Proc. Natl. Acad. Sci. USA* 1985, 82, 5131; *Biochemistry*, 1993, 32, 11035; and U.S. Patent No. 4,631,211) utilized individual polyethylene bags, referred to "tea bags" to generate peptide libraries. The tea bags, containing C-terminal amino acids bound to a solid support, were mixed and coupled with the requisite amino acids using solid phase synthesis techniques. Common steps, such as resin washing and deprotection of α -amino groups, can be performed simultaneously in a single reaction vessel and upon completion of the synthesis, each bag contained a single peptide sequence. Dooley et al. in U.S. Patent 5,367,053, used combinatorial libraries for the determination of high affinity opioid receptors. Huebner in U.S. Patent 5,182,366, describes a method of preparing a mixture of peptides having known composition using three essential steps, dividing an amount of a mixture of amino acid derivatized resins, coupling a subsequent amino acid and combining a known amount of a different resin together to obtain peptide mixtures. Also described are methods to retrieve and analyze the amino acid sequence. Appel et al. in WO PCT 92/09300, describes the synthesis of complex mixtures of solid support-coupled amino acids in which the mixture contains an equimolar representation of each reacted amino acid coupled. Geysen in published European Patent Application 0 138 855 describes a method of synthesizing a peptide library and detecting a peptide comprising a sequence of

5

3

10

amino acids which has antigenic activity. Pirrung et al. in U.S. Patent 5,143,854 describe polypeptide arrays synthesized using photoremovable groups. Synthesized combinatorial libraries have provided an extraordinary number of various peptides in such libraries and the availability of rapid screening of the library which can identify lead pharmaceutical peptides.

15

20

Combinatorial approaches have recently been extended to "organic," or non-peptide, libraries. Zambias et al. (U.S. Patent No. 5,712,171) describe a method of generating libraries that contain aminimides, oxazolones, sulfonylaminides and phosphonylaminides as the core structure in spatially arranged arrays. Combinatorial chemical methods have been applied to a limited number of heterocyclic compounds, as described, for example, in U.S. Patent Nos. 5,288,514; 5,324,483; and Goff et al., *J. Org. Chem.*, 60:5748-5749 (1995). See also U.S. Patent Nos. 5,549,974 and 5,506,337. However, the heterocyclic libraries to date contain compounds of limited diversity and complexity.

25

30

20

35

40

45

50

Substituent limitations have been overcome for mixtures of peptides and peptidomimetics through the use of solid phase techniques versus solution-phase. An important step in the development of solid-phase techniques was the discovery of methods to prepare large numbers of individual compounds simultaneously, as described, for example, by Houghten in U.S. Patent No. 4,631,211. These solid phase methods, however, have rarely been applied to the syntheses of complex heterocyclic structures. Therefore a need exists to develop more complex "organic" libraries based on heterocyclic medicinal compounds which would need less time and effort in the synthesis and testing required to bring an organic pharmaceutical product to fruition. In short, improved methods for generating therapeutically

35

55

5

4

useful heterocyclic compounds, such as oxadiazole and
thiadiazole derivatives, are desired.

10

5

15

20

25

30

35

40

45

50

55

Oxadiazoles, for example, have been the subject
of investigation in a number of different biological
areas. A number of patents cite oxadiazole derivatives
as pesticides and acaricides. 1,2,4-Oxadiazoles have
been proposed as: (a) muscarinic receptor agonists (as
described by Messer W. S. Jr., et al., *J. Med. Chem.*
40:1230 (1997); Showell, G. A., et al., *J. Med. Chem.*,
34:1086 (1991); Orlek, B. S., et al., *J. Med. Chem.*, 34:
2726 (1991)), (b) benzodiazepine receptor agonists (as
described by Watjen, F., et al. *J. Med. Chem.*, 32:2282
(1989)), (c) histamine H₃ receptor antagonists (as
described by Clitherow, J. W.; et al. *Bioorg. Med. Chem.*
Lett., 6: 833 (1996)), and (d) antiviral compounds (as
described by Diana, G. D., et al. *J. Med. Chem.*, 37:2421
(1994)). In general, the oxadiazole ring system has been
used as a replacement for ester or amide functionalities
and has been primarily limited to simpler alkyl and aryl
derivatives (Andersen, K. E., et al. *Eur. J. Med. Chem.*,
31:417 (1996)). A series of dipeptidomimetic oxadiazoles
have been made and incorporated into peptide sequences as
replacements for dipeptides (Borg, S., et al., *Proc. Am.*
Pept. Symp., 14th, 689-690, (Mayflower Scientific,
Kingswinford, UK 1996); Borg, S., et al. *J. Org. Chem.*,
60:3112 (1996); Borg, S., et al. *Eur. J. Med. Chem.* 28:
801 (1993)). Oxadiazoles with a 5-chloromethyl
substituent have been described as plant growth
regulators (Jpn. Kokai Tokkyo Koho, 4 pp. CODEN: JKXXAF,
JP 57188503 A2 821119; Showa, Application Ser. No.:
JP 81-74643 810518). Other chloromethyl oxadiazoles have
been made and used to alkylate amines and other
nucleophiles (Crovetti, A. J., et al., *J. Heterocycl.*

5

5

Chem., 9:435 (1972)). However, a systematic exploration of oxadiazoles has not been performed.

10

15

20

25

30

35

The general methods for the synthesis of 1,2,4-oxadiazoles fall into two categories: acylation and cyclization of amidoximes, or dipolar cycloaddition of nitrile oxides to nitriles (Lianis, P.S., et al., *J. Heterocyclic Chem.*, 26:1683 (1989)). The latter is possible only with highly activated nitriles and thus has limited utility. The most general method of synthesis relies on the acylation and cyclization of amidoximes. Amidoximes are prepared from aliphatic or aromatic nitriles by addition of hydroxylamine. Conversion to the oxadiazoles is realized by treatment with acid chlorides (Chiou, S., et al., *Chem. Ber.* 17:1685 (1984)) or anhydrides in refluxing pyridine (Claisse, J. A., et al. *J. Chem. Soc. Perkin I*, 2241 (1973)). Liang and Feng used the symmetrical anhydrides generated from 2-hydroxy carboxylic acids in the presence of a carbodiimide as the acylating species to give 5-hydroxymethyl substituted oxadiazoles (Liang, G. B., et al. *Tetrahedron Lett.*, 37: 6627 (1996)). However, in the majority of examples, only simple aliphatic or aromatic carboxylic acid derivatives have been used.

40

45

50

This invention satisfies these needs and provides related advantages as well. The present invention overcomes the known limitations to classical organic synthesis of oxadiazoles, for example, as well as the shortcomings of combinatorial chemistry related to heterocycles. The present invention allows for rapid generation of large diverse libraries of complex heterocycles as discrete molecules or molecules bound to a resin. The present invention can utilize a readily available pool of building blocks that can be incorporated into the various regions of the molecule.

55

5

6

10

15

20

Furthermore, the method of making the present invention allows for the use of building blocks that contain a wide range of diverse functionality. Therefore, building blocks, such as those described above, can provide libraries that consist of large numbers as well as libraries that are extremely diverse with respect to the functionality contained within those libraries. The present invention combines the techniques of solid-phase synthesis of heterocycles and the general techniques of synthesis of combinatorial libraries to prepare highly diverse new oxadiazole, thiadiazole and triazole compounds.

SUMMARY OF THE INVENTION

25

15

The present invention relates to novel oxadiazole, thiadiazole and triazole compounds of the following formula:

30

35

Formula (I)

40

wherein X₁, X₂, X₃, X₄, T, U and V have the meanings provided below.

45

The invention further relates to combinatorial libraries containing two or more such compounds, and to the generation of such combinatorial libraries composed of such compounds.

25

DETAILED DESCRIPTION OF THE INVENTION

The present invention provides novel compounds and libraries of novel compounds of Formula (I):

30

35

Formula (I)

40

15 wherein:

T, U and V are independently selected from an oxygen, sulfur or nitrogen atom, provided that at least two of T, U and V are a nitrogen atom;

45

20 X₁ is H, -NHC(O)NR₁R₂, -CO₂R₁, -OR₁, -NR₁R₂, -C(O)NR₁R₂, or -CH₂NR₁R₂ wherein R₁ is a hydrogen atom or a functionalized resin; and R₂ is a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₂ to C₇ alkenyl, C₂ to C₇ substituted alkenyl, phenyl,

50

55

substituted phenyl, naphthyl, substituted naphthyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, heteroaryl or substituted heteroaryl, heterocycle or substituted heterocycle; or -NR₁R₂ together is of the formula:

5

9

wherein Q is a hydrogen atom or functionalized resin;
and

10

X₂ is C₁ to C₁₂ alkylene, C₁ to C₁₂ substituted alkylene, C₂ to C₇ alkenylene, C₂ to C₇ substituted alkenylene, C₂ to C₇ alkynylene, C₃ to C₇ cycloalkylene, C₃ to C₇ substituted cycloalkylene, C₃ to C₇ cycloalkenylene, C₃ to C₇ substituted cycloalkenylene, phenylene, substituted phenylene, naphthylene, substituted naphthylene, C₇ to C₁₂ phenylalkylene, or C₇ to C₁₂ substituted phenylalkylene C₇ to C₁₂ phenylalkox, or C₇ to C₁₂ substituted phenylalkoxy; or

15

20

X₂ is of the formula:

25

wherein m and n are integers independently selected from
0 to 6, provided that m and n are not together 0; and G
is phenylene or substituted phenylene; or

30

X₂ is of the formula:

35

wherein m and n are integers independently selected from
0 to 6, provided that m and n are not together 0; and R₃
is a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₁ to C₆ alkyl sulfonyl, C₁ to C₆ substituted alkyl sulfonyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl, substituted phenylaminothiocarbonyl, C₁ to C₇

40

45

50

30

55

5

10

alkoxycarbonyl, C₁ to C₆ substituted alkoxycarbonyl,
 phenoxycarbonyl or substituted phenoxycarbonyl; or

10

X₂ is of the formula (II):

15

20

5 wherein n is an integer selected from 0 to 6; R₄ and R₅
 are together or independently a hydrogen atom, C₁ to C₆
 alkyl, C₁ to C₆ substituted alkyl, C₂ to C₇ alkenyl, C₂ to
 C₇ alkynyl, C₂ to C₇ substituted alkenyl, C₂ to C₇
 25 substituted alkynyl, C₁ to C₇ acyl, C₁ to C₇ substituted
 10 acyl, C₃ to C₇ cycloalkyl, C₃ to C₇ substituted
 cycloalkyl, C₃ to C₇ cycloalkenyl, C₃ to C₇ substituted
 cycloalkenyl, a heterocyclic ring, substituted
 30 heterocyclic ring, heteroaryl, substituted heteroaryl,
 C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl,
 15 C₇ to C₁₂ phenylalkoxy, C₇ to C₁₂ substituted
 phenylalkoxy, phenyl, substituted phenyl, naphthyl,
 35 substituted naphthyl, cyclic C₂ to C₇ alkylene,
 substituted cyclic C₂ to C₇ alkylene, cyclic C₂ to C₇
 heteroalkylene, substituted cyclic C₂ to C₇
 20 heteroalkylene, carboxy, protected carboxy,
 hydroxymethyl or protected hydroxymethyl; and
 40 G is phenylene or substituted phenylene; or

45

50

55

5

11

X_2 is of the formula (III):

10

15

wherein J is phenylene or substituted phenylene, K is phenylene or substituted phenylene, and m and n are independently selected from 0 and 1; or

20

X_2 is of the formula (IV) or (V):

25

; and

30

X_3 is absent or of the formula:

35

40

10 wherein:

45

R_4 and R_5 are together or independently a hydrogen atom, C_1 to C_6 alkyl, C_2 to C_7 alkenyl, C_2 to C_7 alkynyl, C_1 to C_6 substituted alkyl, C_2 to C_7 substituted alkenyl, C_2 to C_7 substituted alkynyl, C_1 to C_7 acyl, C_1 to C_7 substituted acyl, C_3 to C_7 cycloalkyl, C_3 to C_7 substituted cycloalkyl, C_3 to C_7 cycloalkenyl, C_3 to C_7 substituted cycloalkenyl, a heterocyclic ring,

55

substituted heterocyclic ring, heteroaryl, substituted heteroaryl, C₁ to C₁₂ phenylalkyl, C₁ to C₁₂ substituted phenylalkyl, C₁ to C₁₂ phenylalkoxy, C₁ to C₁₂ substituted phenylalkoxy, phenyl, substituted phenyl, naphthyl, substituted naphthyl, cyclic C₂ to C₇ alkylene, substituted cyclic C₂ to C₇ alkylene, cyclic C₂ to C₇ heteroalkylene, substituted cyclic C₂ to C₇ heteroalkylene, carboxy, protected carboxy, hydroxymethyl or protected hydroxymethyl; or

X₃ is of the formula (VIa) or (VIb):

(VIa)

(VIb)

wherein in formula (VIa) m and n are independently selected from 0, 1, 2, 3 and 4 and, preferably, are 1; and wherein in formula (VIb) m is 0, 1, 2, 3 or 4 and, preferably, is 0; or

X₃ is of the formula:

wherein R₆ is a hydrogen atom, amino, amino-protecting group, -NR₇R₈, carboxy, carboxy-protecting group, -C(O)NR₇R₈ wherein R₇ and R₈ are independently selected from a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₁₂ phenylalkyl, C₁ to C₁₂

substituted phenylalkyl, C_1 to C_7 acyl, C_1 to C_7
substituted acyl, phenylsulfonyl, substituted
phenylsulfonyl, C_1 to C_4 alkylsulfonyl, C_1 to C_4
substituted alkylsulfonyl, C_1 to C_6 alkylaminocarbonyl,
 C_1 to C_6 substituted alkylaminocarbonyl,
phenylaminocarbonyl, substituted phenylaminocarbonyl, C_1
to C_6 alkylaminothiocarbonyl, C_1 to C_6 substituted
alkylaminothiocarbonyl, phenylaminothiocarbonyl and
substituted phenylaminothiocarbonyl; and m and n are
independently selected from 0, 1, 2, 3 and 4; or

X_3 is of the formula (VII) to (XIII):

(VII)

(VIII)

(IX)

(X)

(XI)

(XII)

(XIII)

5

14

wherein q is 1 or 2; r is 0 or 1; s and t are independently selected from 0, 1 or 2; and

10

R₇ and R₈ are independently selected from a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl; and

20

25

R₉ is a hydrogen atom, -OH, hydroxy-protecting group, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, C₁ to C₇ phenylalkoxy, phenyl, substituted phenyl, heteroaryl or substituted heteroaryl; and

30

35

X₄ is absent or a hydrogen atom, -OH, -CO₂H, -C(O)NR₇R₈ or -NR₇R₈, wherein R₇ and R₈ are independently selected from a functionalized resin, a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl; or -NR₇R₈ together is of the formula:

40

45

30

50

55

5

15

10

15

20

25

30

wherein R_9 and R_{10} are independently selected from a hydrogen atom, C_1 to C_6 alkyl, C_1 to C_6 substituted alkyl, C_7 to C_{12} phenylalkyl, C_7 to C_{12} substituted phenylalkyl, C_7 to C_{12} phenylalkoxy, C_7 to C_{12} substituted phenylalkoxy, C_1 to C_6 acyl, C_1 to C_6 substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C_1 to C_6 alkylsulfonyl, C_1 to C_6 substituted alkylsulfonyl, C_1 to C_6 alkylaminocarbonyl, C_1 to C_6 substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C_1 to C_6 alkylaminothiocarbonyl, C_1 to C_6 substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl; and s is an integer selected from 1 to 5; or

a pharmaceutically acceptable salt of a compound of the formula (I).

35

In a preferred embodiment of this invention, the oxadiazole compounds and libraries containing Formula (I):

40

45

Formula (I)

50

wherein T is N , U is O and V is N ; and X_1 is $-CO_2R_1$, $-OR_1$, $-NR_1R_2$ or $-C(O)NR_1R_2$; or $-NR_1R_2$ together is of the formula:

55

16

where Q is defined above; and

X₂ is C₁ to C₁₂ alkylene, C₁ to C₁₂ substituted alkylene, C₃ to C₇ cycloalkylene, C₃ to C₇ substituted cycloalkylene, phenylene, substituted phenylene, naphthylene, substituted naphthylene, C₁ to C₁₂ phenylalkylene, or C₁ to C₁₂ substituted phenylalkylene; or

X₂ is of the formula:

wherein m is 1 to 3 and n is 1 to 4; or

5

17

X_2 is of the formula (II):

10

15

wherein n is 0 or 1; R_4 and R_5 are together or independently a hydrogen atom, C_1 to C_6 alkyl or C_1 to C_{10} substituted alkyl; or

20

X_2 is of the formula (III):

25

30

wherein m and n are integers independently selected from 0 and 1; or

35

10 X_3 is absent or of the formula:

40

45

wherein:

R_4 and R_5 are together or independently a hydrogen atom, C_1 to C_6 alkyl, C_7 to C_{12} substituted phenylalkyl, substituted phenyl, hydroxymethyl, protected

50

55

18

hydroxymethyl, C₃ to C₇ cycloalkyl or C₃ to C₇ substituted cycloalkyl; or

X₃ is of the formula (VIb):

wherein m is 0; or

X₃ is of the formula:

wherein m is 0 to 2 and n is 1 to 4, and R_6 is as described above; and

where X₃ is absent, X₄ is of the formula (VII), (X), (XI), (XII) or (XIII):

19

(VII)

(X)

(XI)

(XII)

(XIII)

wherein R_9 is a hydrogen atom or $-OH$, and R_7 , R_8 , q , r , s and t are as described above.

In another preferred embodiment of this invention, the compounds and libraries are of Formula (I) wherein:

X_1 is $-CO_2R_1$, $-OR_1$, $-NR_1R_2$ or $-C(O)NR_1R_2$; or $-NR_1R_2$ together is of the formula:

where Q is defined above.

5

20

In another preferred embodiment of this invention, the compounds and libraries are of Formula (I) wherein:

10

U is oxygen, T is nitrogen and V is nitrogen;

15

5 X₁ is OH or CONH₂; or

X₁ is

20

2-(1-pyrrolidino)ethylamine,
2-pyridinemethylamine, 2-(4-imidazole)ethylamine,
cyclopentylamine, allylamine, 2-methoxyethylamine,
10 (+/-)-tetrahydrofurylamine, benzylamine,

The present invention also provides a method of preparing libraries wherein compounds of Formula (I), in particular, oxadiazoles, are made by reacting a resin-bound amine with a nitrile-containing carboxylic acid, nitrile-containing isocyanate or nitrile-containing radical with a leaving group to obtain a resin-bound nitrile; cyclizing the nitrile to obtain an oxadiazole containing an amino-protected group; deprotecting the amino-protected group to obtain an oxadiazole amine; and reacting the oxadiazole amine with a carboxylic acid or a sulfonyl chloride or an isocyanate or an isothiocyanate to obtain the oxadiazole library. Another method of preparing oxadiazole libraries comprises reacting a resin-bound amine with a nitrile-containing carboxylic acid, isocyanate or leaving group to obtain a resin-bound nitrile; cyclizing the nitrile to obtain an oxadiazole containing a leaving group; and reacting the leaving group with a primary amine or secondary amine to obtain a oxadiazole secondary amine or oxadiazole tertiary amine; and optionally reacting the secondary amine with a carboxylic acid or a sulfonyl chloride or an isocyanate or an isothiocyanate to obtain the oxadizaole library. In a preferred embodiment the resin-bound amine can be prepared by displacing a resin-bound leaving group with a primary amine. In another embodiment, the resin-bound amine can be prepared by reducing a resin-bound imine formed from either a resin-bound aldehyde with a primary amine or a resin-bound primary amine with an aldehyde.

50

55

Yet another method comprises reacting a resin-bound leaving group with a nitrile-containing phenoxide ion or amine to obtain a resin-bound nitrile; cyclizing the nitrile to obtain to an oxadiazole containing an amino-protected group; deprotecting the amino-protected group to obtain an amine; and reacting the amine with a carboxylic acid or a sulfonyl chloride or an isocyanate or an isothiocyanate to obtain the oxadiazole library. Still another method comprises reacting a resin-bound leaving group with a nitrile-containing phenoxide ion to obtain a resin-bound nitrile; cyclizing the nitrile to obtain an oxadiazole containing a leaving group; and reacting the leaving group with a primary or secondary amine to obtain a secondary or a tertiary amine of the oxadiazole library; and optionally reacting the secondary amine with a carboxylic acid or a sulfonyl chloride or an isocyanate or an isothiocyanate to obtain the oxadiazole library.

Alternatively, the present invention also provides a method of preparing oxadiazole libraries wherein oxadiazole compounds of Formula (I) are made by reducing an imine formed between a resin-bound aldehyde and an amine containing a protected carboxylic acid to give a protected carboxylic acid bound to resin; deprotecting the protected carboxylic acid to give a resin bound carboxylic acid and reacting the carboxylic acid with an amidoxime to give an oxadiazole library.

Another method of preparing oxadiazole libraries comprises reacting a resin-bound alcohol with an amine containing a protected carboxylic acid to give a protected carboxylic acid bound to resin through a carbamate linkage; deprotecting the protected carboxylic acid to give a carboxylic acid and reacting the carboxylic acid with an amidoxime to give an oxadiazole library.

In a preferred embodiment, the methods described above further comprise the step of cleaving the library from the resin.

In the above Formula (I), the stereochemistry of chiral centers associated with R_2 and R_3 when X_3 is:

can independently be in the R or S configuration, or a mixture of the two. The chiral centers can be further designated as R or S or R,S or d,D, l,L or d,l, D,L.

In the above Formula (I), the term " C_1 to C_6 alkyl" denotes such radicals as methyl, ethyl, n-propyl, isopropyl, n-butyl, iso-butyl, sec-butyl, tert-butyl, amyl, tert-amyl, hexyl and the like. The preferred " C_1 to C_6 alkyl" groups are methyl, iso-butyl, sec-butyl and isopropyl.

The term " C_2 to C_7 alkenyl" denotes such radicals as vinyl, allyl, 2-butenyl, 3-butenyl, 2-pentenyl, 3-pentenyl, 4-pentenyl, 2-hexenyl, 3-hexenyl, 4-hexenyl, 5-hexenyl, 2-heptenyl, 3-heptenyl, 4-heptenyl, 5-heptenyl, 6-heptenyl, as well as dienes and trienes of straight and branched chains.

The term " C_2 to C_7 alkynyl" denotes such radicals as ethynyl, propynyl, 2-butyne, 2-pentyne, 3-pentyne, 2-hexyne, 3-hexyne, 4-hexyne, 2-heptyne, 3-heptyne, 4-heptyne, 5-heptyne as well as di- and tri-ynes of straight and branched chains.

The terms "C₁ to C₆ substituted alkyl," "C₂ to C₇ substituted alkenyl," "C₂ to C₇ substituted alkynyl," and "C₁ to C₁₂ substituted alkylene" denote that the above C₁ to C₆ alkyl groups and C₂ to C₇ alkenyl and C₂ to C₇ alkynyl groups and C₁ to C₁₂ alkylene are substituted by one or more, and preferably one or two, halogen, hydroxy, protected hydroxy, oxo, protected oxo, C₃ to C₇ cycloalkyl, naphthyl, amino, protected amino, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino, guanidino, protected guanidino, heterocyclic ring, substituted heterocyclic ring, imidazolyl, indolyl, pyrrolidinyl, C₁ to C₇ alkoxy, C₁ to C₇ acyl, C₁ to C₇ acyloxy, nitro, carboxy, protected carboxy, carbamoyl, carboxamide, protected carboxamide, N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆ alkyl)carboxamide, N,N-di(C₁ to C₆ alkyl)carboxamide, cyano, methylsulfonylamino, thiol, C₁ to C₆ alkylthio or C₁ to C₆ alkylsulfonyl groups. The substituted alkyl groups may be substituted once or more, and preferably once or twice, with the same or with different substituents.

Examples of the above substituted alkyl groups include the 2-oxo-prop-1-yl, 3-oxo-but-1-yl, cyanomethyl, nitromethyl, chloromethyl, hydroxymethyl, tetrahydropyranyloxymethyl, trityloxymethyl, propionyloxymethyl, amino, methylamino, aminomethyl, dimethylamino, carboxymethyl, allyloxycarbonylmethyl, allyloxycarbonylaminomethyl, methoxymethyl, ethoxymethyl, t-butoxymethyl, acetoxymethyl, chloromethyl, bromomethyl, iodomethyl, trifluoromethyl, 6-hydroxyhexyl, 2,4-dichloro(n-butyl), 2-aminopropyl, 1-chloroethyl, 2-chloroethyl, 1-bromoethyl, 2-chloroethyl, 1-fluoroethyl, 2-fluoroethyl, 1-iodoethyl, 2-iodoethyl, 1-chloropropyl, 2-chloropropyl, 3-chloropropyl, 1-bromopropyl, 2-bromopropyl, 3-bromopropyl, 1-fluoropropyl, 2-fluoropropyl, 3-fluoropropyl, 1-iodopropyl, 2-

5 iodopropyl, 3-iodopropyl, 2-aminoethyl, 1- aminoethyl, N-
benzoyl-2-aminoethyl, N-acetyl-2-aminoethyl, N-benzoyl-1-
10 aminoethyl, N-acetyl-1-aminoethyl and the like.

Examples of the above substituted alkenyl
5 groups include styrenyl, 3-chloro-propen-1-yl, 3-chloro-
buten-1-yl, 3-methoxy-propen-2-yl, 3-phenyl-buten-2-yl,
15 1-cyano-buten-3-yl and the like. The geometrical
isomerism is not critical, and all geometrical isomers
for a given substituted alkenyl can be used.

20 10 Examples of the above substituted alkynyl
groups include phenylacetylen-1-yl, 1-phenyl-2-propyn-1-
yl and the like.

25 The term "C₂ to C₇ alkenylene" as used herein
denotes an alkene group that is linked by two different
15 substituents. Similarly, the term "C₂ to C₇ alkynylene"
as used herein denotes an alkyne group that is linked by
two different substituents. The term "C₂ to C₇
30 substituted alkenylene" as used herein denotes an alkene
group that is linked by two different substituents and
20 is further substituted by one or two halogen, hydroxy,
protected hydroxy, oxo, protected oxo, C₃ to C₆,
35 cycloalkyl, naphthyl, amino, protected amino,
(monosubstituted)amino, protected (monosubstituted)amino,
(disubstituted)amino, guanidino, protected guanidino,
25 heterocyclic ring, substituted heterocyclic ring,
40 imidazolyl, indolyl, pyrrolidinyl, C₁ to C₇ alkoxy, C₁ to
C₇ acyl, C₁ to C₇ acyloxy, nitro, carboxy, protected
carboxy, carbamoyl, carboxamide, protected carboxamide,
N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆
45 30 alkyl)carboxamide, N,N-di(C₁ to C₆ alkyl)carboxamide,
cyano, methylsulfonylamino, thiol, C₁ to C₆ alkylthio or
C₁ to C₆ alkylsulfonyl groups.

5

42

10

The term "oxo" denotes a carbon atom bonded to two additional carbon atoms substituted with an oxygen atom doubly bonded to the carbon atom, thereby forming a ketone moiety.

15

5 The term "protected oxo" denotes a carbon atom bonded to two additional carbon atoms substituted with two alkoxy groups or twice bonded to a substituted diol moiety, thereby forming an acyclic or cyclic ketal moiety.

20

10 The term "C₁ to C₇ alkoxy" as used herein denotes groups such as methoxy, ethoxy, n-propoxy, isopropoxy, n-butoxy, t-butoxy and like groups. A preferred alkoxy is methoxy. The term "C₁ to C₇ substituted alkoxy" means the alkyl portion of the alkoxy
25 can be substituted in the same manner as in relation to C₁ to C₆ substituted alkyl. Similarly, the term "C₁ to C₇ phenylalkoxy" as used herein means "C₁ to C₇ alkoxy" bonded to a phenyl radical.

30

35

The term "C₁ to C₇ acyloxy" denotes herein
20 groups such as formyloxy, acetoxy, propionyloxy, butyryloxy, pivaloyloxy, pentanoyloxy, hexanoyloxy, heptanoyloxy and the like.

40

Similarly, the term "C₁ to C₇ acyl" encompasses groups such as formyl, acetyl, propionyl, butyryl,
25 pentanoyl, pivaloyl, hexanoyl, heptanoyl, benzoyl and the like. Preferred acyl groups are acetyl and benzoyl.

45

The term "C₁ to C₇ substituted acyl" denotes the acyl group substituted by one or more, and preferably one or two, halogen, hydroxy, protected hydroxy, oxo,
30 protected oxo, cyclohexyl, naphthyl, amino, protected amino, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino, guanidino,

50

55

5

43

10

15

heterocyclic ring, substituted heterocyclic ring, imidazolyl, indolyl, pyrrolidinyl, C₁ to C₇ alkoxy, C₁ to C₇ acyl, C₁ to C₇ acyloxy, nitro, C₁ to C₆ alkyl ester, carboxy, protected carboxy, carbamoyl, carboxamide, 5 protected carboxamide, N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆ alkyl)carboxamide, N,N-di(C₁ to C₆ alkyl)carboxamide, cyano, methylsulfonylamino, thiol, C₁ to C₄ alkylthio or C₁ to C₄ alkylsulfonyl groups. The substituted acyl groups may be substituted once or more, 10 and preferably once or twice, with the same or with different substituents.

20

25

Examples of C₁ to C₇ substituted acyl groups include 4-phenylbutyroyl, 3-phenylbutyroyl, 3-phenylpropanoyl, 2-cyclohexanylacetyl, 15 cyclohexanecarbonyl, 2-furanoyl and 3-dimethylaminobenzoyl.

30

35

40

45

The substituent term "C₃ to C₇ cycloalkyl" includes the cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl or cycloheptyl rings. The substituent term "C₃ to C₇ substituted cycloalkyl" indicates the above 20 cycloalkyl rings substituted by one or two halogen, hydroxy, protected hydroxy, C₁ to C₄ alkylthio, C₁ to C₄ alkylsulfoxide, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylthio, C₁ to C₄ substituted 25 alkylsulfoxide, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkyl, C₁ to C₇ alkoxy, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, oxo, protected oxo, (monosubstituted)amino, (disubstituted)amino, trifluoromethyl, carboxy, protected carboxy, phenyl, substituted phenyl, phenylthio, 30 phenylsulfoxide, phenylsulfonyl, amino, or protected amino groups.

50

The term "C₃ to C₇ cycloalkylene" means a cycloalkyl, as defined above, where the cycloalkyl radical is bonded at two positions connecting together

55

5

44

10

two separate additional groups. Similarly, the term "C₃ to C₇ substituted cycloalkylene" means a cycloalkylene where the cycloalkyl radical is bonded at two positions connecting together two separate additional groups and further bearing at least one additional substituent.

15

20

25

The term "C₃ to C₇ cycloalkenyl" indicates a 1,2, or 3- cyclopentenyl ring, a 1,2,3 or 4-cyclohexenyl ring or a 1,2,3,4 or 5-cycloheptenyl ring, while the term "substituted C₃ to C₇ cycloalkenyl" denotes the above C₃ to C₇ cycloalkenyl rings substituted by a C₁ to C₆ alkyl radical, halogen, hydroxy, protected hydroxy, C₁ to C₇ alkoxy, trifluoromethyl, carboxy, protected carboxy, oxo, protected oxo, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino, phenyl, substituted phenyl, amino, or protected amino.

30

35

40

45

The term "C₃ to C₇ cycloalkenylene" is a cycloalkenyl ring, as defined above, where the cycloalkenyl radical is bonded at two positions connecting together two separate additional groups. Similarly, the term "substituted C₃ to C₇ cycloalkenylene" means a cycloalkenylene further substituted by halogen, hydroxy, protected hydroxy, C₁ to C₄ alkylthio, C₁ to C₄ alkylsulfoxide, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylthio, C₁ to C₄ substituted alkylsulfoxide, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkyl, C₁ to C₇ alkoxy, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, oxo, protected oxo, (monosubstituted)amino, (disubstituted)amino, trifluoromethyl, carboxy, protected carboxy, phenyl, substituted phenyl, phenylthio, phenylsulfoxide, phenylsulfonyl, amino, or protected amino group.

50

55

The term "heterocycle" or "heterocyclic ring" denotes optionally substituted five-membered or six-membered rings that have 1 to 4 heteroatoms, such as

5

45

oxygen, sulfur and/or nitrogen, in particular nitrogen, either alone or in conjunction with sulfur or oxygen ring atoms. These five-membered or six-membered rings may be saturated, fully saturated or partially unsaturated, with 5 fully saturated rings being preferred. An "amino-substituted heterocyclic ring" means any one of the above-described heterocyclic rings is substituted with at least one amino group. Preferred heterocyclic rings include morpholino, piperidinyl, piperazinyl, 10 tetrahydrofurano, pyrrolo, and tetrahydrothiophen-yl.

20

The term "substituted heterocyce" or "substituted heterocyclic ring" means the above-described heterocyclic ring is substituted with, for example, one or more, and preferably one or two, substituents which 25 are the same or different which substituents can be halogen, hydroxy, protected hydroxy, cyano, nitro, C₁ to C₆ alkyl, C₁ to C₇ alkoxy, C₁ to C₇ substituted alkoxy, C₁ to C₇ acyl, C₁ to C₇ acyloxy, carboxy, protected carboxy, carboxymethyl, protected carboxymethyl, hydroxymethyl, 30 protected hydroxymethyl, amino, protected amino, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino carboxamide, protected carboxamide, N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆ alkyl)carboxamide, N, N-di(C₁ to C₆ alkyl)carboxamide, 35 trifluoromethyl, N-((C₁ to C₆ alkyl)sulfonyl)amino or N-(phenylsulfonyl)amino groups.

40

The term "heteroaryl" means a heterocyclic aromatic derivative which is a five-membered or six-membered ring system having from 1 to 4 heteroatoms, such 45 as oxygen, sulfur and/or nitrogen, in particular nitrogen, either alone or in conjunction with sulfur or oxygen ring atoms. Examples of heteroaryls include pyridinyl, pyrimidinyl, and pyrazinyl, pyridazinyl, pyrrolo, furano, oxazolo, isoxazolo, phthalimido, 50 thiazolo and the like.

55

5

46

10

15

20

25

The term "substituted heteroaryl" means the above-described heteroaryl is substituted with, for example, one or more, and preferably one or two, substituents which are the same or different which substituents can be halogen, hydroxy, protected hydroxy, cyano, nitro, C₁ to C₆ alkyl, C₁ to C₇ alkoxy, C₁ to C₇ substituted alkoxy, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₁ to C₇ acyloxy, carboxy, protected carboxy, carboxymethyl, protected carboxymethyl, hydroxymethyl, protected hydroxymethyl, amino, protected amino, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino, carboxamide, protected carboxamide, N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆ alkyl)carboxamide, N, N-di(C₁ to C₆ alkyl)carboxamide, trifluoromethyl, N-(C₁ to C₆ alkyl)sulfonyl amino or N-(phenylsulfonyl)amino groups.

30

35

The term "C₇ to C₁₂ phenylalkyl" denotes a C₁ to C₆ alkyl group substituted at any position by a phenyl, substituted phenyl, heteroaryl or substituted heteroaryl. Examples of such a group include benzyl, 2-phenylethyl, 3-phenyl(n-propyl), 4-phenylhexyl, 3-phenyl(n-amyl), 3-phenyl(sec-butyl) and the like. Preferred C₇ to C₁₂ phenylalkyl groups are the benzyl and the phenylethyl groups.

40

45

50

The term "C₇ to C₁₂ substituted phenylalkyl" denotes a C₁ to C₁₂ phenylalkyl group substituted on the C₁ to C₆ alkyl portion with one or more, and preferably one or two, groups chosen from halogen, hydroxy, protected hydroxy, oxo, protected oxo, amino, protected amino, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino, guanidino, protected guanidino, heterocyclic ring, substituted heterocyclic ring, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, C₁ to C₇ substituted alkoxy, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₁ to C₇ acyloxy, nitro, carboxy, protected carboxy,

55

5

47

10

15

20

25

30

35

carbamoyl, carboxamide, protected carboxamide, N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆ alkyl)carboxamide, N, N-(C₁ to C₆ dialkyl)carboxamide, cyano, N-(C₁ to C₆ alkylsulfonyl)amino, thiol, C₁ to C₄ alkylthio, C₁ to C₄ alkylsulfonyl groups; and/or the phenyl group may be substituted with one or more, and preferably one or two, substituents chosen from halogen, hydroxy, protected hydroxy, cyano, nitro, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, C₁ to C₇ substituted alkoxy, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₁ to C₇ acyloxy, carboxy, protected carboxy, carboxymethyl, protected carboxymethyl, hydroxymethyl, protected hydroxymethyl, amino, protected amino, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino, carboxamide, protected carboxamide, N-(C₁ to C₆ alkyl) carboxamide, protected N-(C₁ to C₆ alkyl) carboxamide, N, N-di(C₁ to C₆ alkyl)carboxamide, trifluoromethyl, N-((C₁ to C₆ alkyl)sulfonyl)amino, N-(phenylsulfonyl)amino, cyclic C₂ to C₇ alkylene or a phenyl group, substituted or unsubstituted, for a resulting biphenyl group. The substituted alkyl or phenyl groups may be substituted with one or more, and preferably one or two, substituents which can be the same or different.

40

45

Examples of the term "C₁ to C₁₂ substituted phenylalkyl" include groups such as 2-phenyl-1-chloroethyl, 2-(4-methoxyphenyl)ethyl, 4-(2,6-dihydroxyphenyl)n-hexyl, 2-(5-cyano-3-methoxyphenyl)n-pentyl, 3-(2,6-dimethylphenyl)n-propyl, 4-chloro-3-aminobenzyl, 6-(4-methoxyphenyl)-3-carboxy(n-hexyl), 5-(4-aminomethylphenyl)-3-(aminomethyl)n-pentyl, 5-phenyl-3-oxo-n-pent-1-yl and the like.

50

The term "C₁ to C₁₂ phenylalkylene" specifies a C₁ to C₁₂ phenylalkyl, as defined above, where the phenylalkyl radical is bonded at two positions connecting

55

5

48

10

15

20

25

together two separate additional groups. The definition includes groups of the formula: -phenyl-alkyl- and -alkyl-phenyl-alkyl- where "-" represents a bond.

Substitutions on the phenyl ring can be 1,2, 1,3 or 1,4.

5 The term "C₁ to C₁₂ substituted phenylalkylene" means a C₁ to C₁₂ phenylalkylene as defined above that is further substituted by halogen, hydroxy, protected hydroxy, C₁ to C₄ alkylthio, C₁ to C₄ alkylsulfoxide, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylthio, C₁ to C₄ substituted alkylsulfoxide, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkyl, C₁ to C₇ alkoxy, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, oxo, protected oxo, (monosubstituted)amino, (disubstituted)amino, trifluoromethyl, carboxy, protected carboxy, phenyl, 15 substituted phenyl, phenylthio, phenylsulfoxide, phenylsulfonyl, amino, or protected amino group on the phenyl ring or on the alkyl group.

30

35

40

45

50

55

The term "substituted phenyl" specifies a phenyl group substituted with one or more, and preferably 20 one or two, moieties chosen from the groups consisting of halogen, hydroxy, protected hydroxy, cyano, nitro, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, C₁ to C₇ substituted alkoxy, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₁ to C₇ acyloxy, carboxy, protected carboxy, 25 carboxymethyl, protected carboxymethyl, hydroxymethyl, protected hydroxymethyl, amino, protected amino, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino, carboxamide, protected carboxamide, N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆ alkyl)carboxamide, N, N-di(C₁ to C₆ alkyl)carboxamide, 30 trifluoromethyl, N-((C₁ to C₆ alkyl)sulfonyl)amino, N-(phenylsulfonyl)amino or phenyl, wherein the phenyl is substituted or unsubstituted, such that, for example, a biphenyl results.

5

49

10

15

20

25

30

35

40

45

50

55

Examples of the term "substituted phenyl" includes a mono- or di(halo)phenyl group such as 2, 3 or 4-chlorophenyl, 2,6-dichlorophenyl, 2,5-dichlorophenyl, 3,4-dichlorophenyl, 2, 3 or 4-bromophenyl, 5 3,4-dibromophenyl, 3-chloro-4-fluorophenyl, 2, 3 or 4-fluorophenyl and the like; a mono or di(hydroxy)phenyl group such as 2, 3 or 4-hydroxyphenyl, 15 2,4-dihydroxyphenyl, the protected-hydroxy derivatives thereof and the like; a nitrophenyl group such as 2, 3 or 4-nitrophenyl; a cyanophenyl group, for example, 2, 3 or 4-cyanophenyl; a mono- or di(alkyl)phenyl group such as 20 2, 3 or 4-methylphenyl, 2,4-dimethylphenyl, 2, 3 or 4-(iso-propyl)phenyl, 2, 3 or 4-ethylphenyl, 2, 3 or 4-(n-propyl)phenyl and the like; a mono or 15 di(alkoxyl)phenyl group, for example, 2,6-dimethoxyphenyl, 2, 3 or 4-methoxyphenyl, 2, 3 or 4-ethoxyphenyl, 2, 3 or 4-(isopropoxy)phenyl, 2, 3 or 4-(t-butoxy)phenyl, 3-ethoxy-4-methoxyphenyl and the 25 like; 2, 3 or 4-trifluoromethylphenyl; a mono- or 20 dicarboxyphenyl or (protected carboxy)phenyl group such as 2, 3 or 4-carboxyphenyl or 2,4-di(protected carboxy)phenyl; a mono-or di(hydroxymethyl)phenyl or (protected hydroxymethyl)phenyl such as 2, 3, or 4-(protected hydroxymethyl)phenyl or 35 3,4-di(hydroxymethyl)phenyl; a mono- or 25 di(aminomethyl)phenyl or (protected aminomethyl)phenyl such as 2, 3 or 4-(aminomethyl)phenyl or 2,4-(protected aminomethyl)phenyl; or a mono- or 40 di(N-(methylsulfonylamino))phenyl such as 2, 3 or 30 4-(N-(methylsulfonylamino))phenyl. Also, the term "substituted phenyl" represents disubstituted phenyl groups wherein the substituents are different, for 45 example, 3-methyl-4-hydroxyphenyl, 3-chloro-4-hydroxyphenyl, 2-methoxy-4-bromophenyl, 35 4-ethyl-2-hydroxyphenyl, 3-hydroxy-4-nitrophenyl, 2-hydroxy 4-chlorophenyl and the like.

5

50

10

15

20

25

The term "phenoxy" denotes a phenyl bonded to an oxygen atom. The term "substituted phenoxy" specifies a phenoxy group substituted with one or more, and preferably one or two, moieties chosen from the groups consisting of halogen, hydroxy, protected hydroxy, cyano, nitro, C₁ to C₆ alkyl, C₁ to C₇ alkoxy, C₁ to C₇ substituted alkoxy, C₁ to C₇ acyl, C₁ to C₇ acyloxy, carboxy, protected carboxy, carboxymethyl, protected carboxymethyl, hydroxymethyl, protected hydroxymethyl, amino, protected amino, (monosubstituted)amino, protected (monosubstituted)amino, (disubstituted)amino, carboxamide, protected carboxamide, N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆ alkyl)carboxamide, N, N-di(C₁ to C₆ alkyl)carboxamide, trifluoromethyl, N-(C₁ to C₆ alkyl)sulfonyl amino and N-(phenylsulfonyl)amino.

30

35

40

45

50

55

Examples of substituted phenoxy include 2-methylphenoxy, 2-ethylphenoxy, 2-propylphenoxy, 2-isopropylphenoxy, 2-sec-butylphenoxy, 2-tert-butylphenoxy, 2-allylphenoxy, 2-propenylphenoxy, 2-cyclopentylphenoxy, 2-fluorophenoxy, 2-(trifluoromethyl)phenoxy, 2-chlorophenoxy, 2-bromophenoxy, 2-methoxyphenoxy, 2-ethoxyphenoxy, 2-isopropoxyphenoxy, 3-methylphenoxy, 3-ethylphenoxy, 3-isopropylphenoxy, 3-tert-butylphenoxy, 3-pentadecylphenoxy, 3-(trifluoromethyl)phenoxy, 3-fluorophenoxy, 3-chlorophenoxy, 3-bromophenoxy, 3-iodophenoxy, 3-methoxyphenoxy, 3-(trifluoromethoxy)phenoxy, 4-methylphenoxy, 4-ethylphenoxy, 4-propylphenoxy, 4-isopropylphenoxy, 4-sec-butylphenoxy, 4-tert-butylphenoxy, 4-tert-amylphenoxy, 4-nonylphenoxy, 4-dodecylphenoxy, 4-cyclophenylphenoxy, 4-(trifluoromethyl)phenoxy, 4-fluorophenoxy, 4-chlorophenoxy, 4-bromophenoxy, 4-iodophenoxy, 4-methoxyphenoxy, 4-(trifluoromethoxy)phenoxy, 4-ethoxyphenoxy,

 3,5-dimethylphenoxy, 4-bromo-3,5-dimethylphenoxy,
 2,4,6-trimethylphenoxy, 2,6-bis(hydroxymethyl)-4-
 methylphenoxy, 2,6-di-tert-butyl-4-methylphenoxy, 2,6-
 di-tert-butyl-4-methoxyphenoxy, 2,4,5-trifluorophenoxy,
 10 2-chloro-3,5-difluorophenoxy, 2,4,6-trichlorophenoxy,
 3,4,5-trimethoxyphenoxy, 2,3,5-trichlorophenoxy, 4-bromo-
 2,6-dimethylphenoxy, 4-bromo-6-chloro-2-methylphenoxy,
 2,6-dibromo-4-methylphenoxy, 2,6-dichloro-4-
 fluorophenoxy, 2,6-dibromo-4-fluorophenoxy,
 15 2,4,6-tribromophenoxy, 2,4,6-triiodophenoxy, 2-chloro-
 4,5-dimethylphenoxy, 4-chloro-2-isopropyl-5-
 methylphenoxy, 2-bromo-4,5-difluorophenoxy,
 2,4,5-trichlorophenoxy, 2,3,5,6-tetrafluorophenoxy and
 the like.

20 The term "C₁ to C₁₂ substituted phenylalkoxy"
 denotes a C₁ to C₁₂ phenylalkoxy group wherein the C₁ to C₆
 alkyl portion is substituted with one or more, and
 preferably one or two, groups selected from halogen,
 hydroxy, protected hydroxy, oxo, protected oxo, amino,
 25 protected amino, (monosubstituted)amino, protected
 (monosubstituted)amino, (disubstituted)amino, guanidino,
 heterocyclic ring, substituted heterocyclic ring, C₁ to C₇
 alkoxy, C₁ to C₇ acyl, C₁ to C₇ acyloxy, nitro, carboxy,
 protected carboxy, carbamoyl, carboxamide, protected
 30 carboxamide, N-(C₁ to C₆ alkyl)carboxamide, protected
 N-(C₁ to C₆ alkyl)carboxamide, N, N-(C₁ to C₆
 dialkyl)carboxamide, cyano, N-(C₁ to C₆
 alkylsulfonyl)amino, thiol, C₁ to C₄ alkylthio, C₁ to C₄
 alkylsulfonyl groups; and/or the phenyl group can be
 35 substituted with one or more, and preferably one or two,
 substituents chosen from halogen, hydroxy, protected

hydroxy, cyano, nitro, C₁ to C₆ alkyl, C₁ to C₇ alkoxy,
C₁ to C₇ acyl, C₁ to C₇ acyloxy, carboxy, protected
carboxy, carboxymethyl, protected carboxymethyl,
hydroxymethyl, protected hydroxymethyl, amino, protected
amino, (monosubstituted)amino, protected
(monosubstituted)amino, (disubstituted)amino,
carboxamide, protected carboxamide, N-(C₁ to C₆ alkyl)
carboxamide, protected N-(C₁ to C₆ alkyl) carboxamide, N,
N-di(C₁ to C₆ alkyl)carboxamide, trifluoromethyl,
N-((C₁ to C₆ alkyl)sulfonyl)amino, N-(phenylsulfonyl)amino
or a phenyl group, substituted or unsubstituted, for a
resulting biphenyl group. The substituted alkyl or
phenyl groups may be substituted with one or more, and
preferably one or two, substituents which can be the same
or different.

Examples of the term "C₁ to C₁₂ substituted
phenylalkoxy" include groups such as 2-(4-
hydroxyphenyl)ethoxy, 4-(4-methoxyphenyl)butoxy, (2R)-3-
phenyl-2-amino-propoxy, (2S)-3-phenyl-2-amino-propoxy,
2-indanoxo, 6-phenyl-1-hexanoxo, cinnamyl, oxo,
(+/-)-2-phenyl-1-propoxy, 2,2-dimethyl-3-phenyl-1-propoxy
and the like.

The term "phthalimide" means a cyclic imide
which is made from phthalic acid, also called
1,2-benzenedicarboxylic acid. The term "substituted
phthalimide" specifies a phthalimide group substituted
with one or more, and preferably one or two, moieties
chosen from the groups consisting of halogen, hydroxy,
protected hydroxy, cyano, nitro, C₁ to C₆ alkyl, C₁ to C₇
alkoxy, C₁ to C₇ substituted alkoxy, C₁ to C₇ acyl, C₁ to C₇
acyloxy, carboxy, protected carboxy, carboxymethyl,
protected carboxymethyl, hydroxymethyl, protected
hydroxymethyl, amino, protected amino,
(monosubstituted)amino, protected (monosubstituted)amino,
(disubstituted)amino, carboxamide, protected carboxamide,

5

54

10

N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆ alkyl)carboxamide, N, N-di(C₁ to C₆ alkyl)carboxamide, trifluoromethyl, N-((C₁ to C₆ alkyl)sulfonyl)amino and N-(phenylsulfonyl)amino.

15

5 Examples of substituted phthalimides include
4,5-dichlorophthalimido, 3-fluorophthalimido,
4-methoxyphthalimido, 3-methylphthalimido,
4-carboxyphthalimido and the like.

20

25

30

35

10 The term "substituted naphthyl" specifies a
naphthyl group substituted with one or more, and
preferably one or two, moieties either on the same ring
or on different rings chosen from the groups consisting
of halogen, hydroxy, protected hydroxy, cyano, nitro,
C₁ to C₆ alkyl, C₁ to C₇ alkoxy, C₁ to C₇ acyl, C₁ to C₇
acyloxy, carboxy, protected carboxy, carboxymethyl,
protected carboxymethyl, hydroxymethyl, protected
hydroxymethyl, amino, protected amino,
(monosubstituted)amino, protected (monosubstituted)amino,
(disubstituted)amino, carboxamide, protected carboxamide,
20 N-(C₁ to C₆ alkyl)carboxamide, protected N-(C₁ to C₆
alkyl)carboxamide, N, N-di(C₁ to C₆ alkyl)carboxamide,
trifluoromethyl, N-((C₁ to C₆ alkyl)sulfonyl)amino or
N-(phenylsulfonyl)amino.

40

45

50

55

 Examples of the term "substituted naphthyl"
25 includes a mono or di(halo)naphthyl group such as 1, 2,
3, 4, 5, 6, 7 or 8-chloronaphthyl, 2, 6-dichloronaphthyl,
2, 5-dichloronaphthyl, 3, 4-dichloronaphthyl, 1, 2, 3, 4,
5, 6, 7 or 8-bromonaphthyl, 3, 4-dibromonaphthyl,
3-chloro-4-fluoronaphthyl, 1, 2, 3, 4, 5, 6, 7 or
30 8-fluoronaphthyl and the like; a mono or
di(hydroxy)naphthyl group such as 1, 2, 3, 4, 5, 6, 7 or
8-hydroxynaphthyl, 2, 4-dihydroxynaphthyl, the protected-
hydroxy derivatives thereof and the like; a nitronaphthyl
group such as 3- or 4-nitronaphthyl; a cyanonaphthyl

5

25

30

35

40

45

50

group, for example, 1, 2, 3, 4, 5, 6, 7 or 8-cyanonaphthyl; a mono- or di(alkyl)naphthyl group such as 2, 3, 4, 5, 6, 7 or 8-methylnaphthyl, 1, 2, 4-dimethylnaphthyl, 1, 2, 3, 4, 5, 6, 7 or 5 8-(isopropyl)naphthyl, 1, 2, 3, 4, 5, 6, 7 or 8-ethylnaphthyl, 1, 2, 3, 4, 5, 6, 7 or 8-(n-propyl)naphthyl and the like; a mono or 15 di(alkoxy)naphthyl group, for example, 2, 6-dimethoxynaphthyl, 1, 2, 3, 4, 5, 6, 7 or 10 8-methoxynaphthyl, 1, 2, 3, 4, 5, 6, 7 or 8-ethoxynaphthyl, 1, 2, 3, 4, 5, 6, 7 or 8-(isopropoxy)naphthyl, 1, 2, 3, 4, 5, 6, 7 or 20 8-(t-butoxy)naphthyl, 3-ethoxy-4-methoxynaphthyl and the like; 1, 2, 3, 4, 5, 6, 7 or 8-trifluoromethylnaphthyl; a 15 mono- or dicarboxynaphthyl or (protected carboxy)naphthyl group such as 1, 2, 3, 4, 5, 6, 7 or 8-carboxynaphthyl or 25 2, 4-di(-protected carboxy)naphthyl; a mono-or di(hydroxymethyl)naphthyl or (protected hydroxymethyl)naphthyl such as 1, 2, 3, 4, 5, 6, 7 or 30 20 8-(protected hydroxymethyl)naphthyl or 3, 4-di(hydroxymethyl)naphthyl; a mono- or di(amino)naphthyl or (protected amino)naphthyl such as 1, 2, 3, 4, 5, 6, 7 or 8-(amino)naphthyl or 2, 4-(protected amino)-naphthyl, 35 a mono- or di(aminomethyl)naphthyl or (protected aminomethyl)naphthyl such as 2, 3, or 4-(aminomethyl)naphthyl or 2, 4-(protected aminomethyl)-naphthyl; or a mono- or di-(N-methylsulfonylamino) 40 naphthyl such as 1, 2, 3, 4, 5, 6, 7 or 8-(N-methylsulfonylamino)naphthyl. Also, the term 30 "substituted naphthyl" represents disubstituted naphthyl groups wherein the substituents are different, for example, 3-methyl-4-hydroxynaphth-1-yl, 3-chloro-4- 45 hydroxynaphth-2-yl, 2-methoxy-4-bromonaphth-1-yl, 4-ethyl-2-hydroxynaphth-1-yl, 3-hydroxy-4-nitronaphth-2-yl, 2-hydroxy-4-chloronaphth-1-yl, 2-methoxy-7- 35 bromonaphth-1-yl, 4-ethyl-5-hydroxynaphth-2-yl,

55

5

56

3-hydroxy-8-nitronaphth-2-yl, 2-hydroxy-5-chloronaphth-1-yl and the like.

10

The term "naphthylene" means a naphthyl radical bonded at two positions connecting together two separate additional groups. Similarly, the term "substituted naphthylene" means a naphthylene group that is further substituted by halogen, hydroxy, protected hydroxy, C₁ to C₄ alkylthio, C₁ to C₄ alkylsulfoxide, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylthio, C₁ to C₄ substituted alkylsulfoxide, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkyl, C₁ to C₇ alkoxy, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, oxo, protected oxo, (monosubstituted)amino, (disubstituted)amino, trifluoromethyl, carboxy, protected carboxy, phenyl, substituted phenyl, phenylthio, phenylsulfoxide, phenylsulfonyl, amino, or protected amino group.

20

25

30

The terms "halo" and "halogen" refer to the fluoro, chloro, bromo or iodo atoms. There can be one or more halogen, which are the same or different. Preferred halogens are chloro and fluoro.

35

The term "(monosubstituted)amino" refers to an amino group with one substituent chosen from the group consisting of phenyl, substituted phenyl, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₂ to C₇ alkenyl, C₂ to C₇ substituted alkenyl, C₂ to C₇ alkynyl, C₂ to C₇ substituted alkynyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl and heterocyclic ring. The (monosubstituted)amino can additionally have an amino-protecting group as encompassed by the term "protected (monosubstituted)amino."

40

45

50

The term "(disubstituted)amino" refers to an amino group with two substituents chosen from the group

55

5

57

consisting of phenyl, substituted phenyl, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ acyl, C₂ to C₇ alkenyl, C₂ to C₇ alkynyl, C₁ to C₁₂ phenylalkyl, and C₁ to C₁₂ substituted phenylalkyl. The two substituents can be the same or different.

15

The term "amino-protecting group" as used herein refers to substituents of the amino group commonly employed to block or protect the amino functionality while reacting other functional groups of the molecule.

20

The term "protected (monosubstituted)amino" means there is an amino-protecting group on the monosubstituted amino nitrogen atom. In addition, the term "protected carboxamide" means there is an amino-protecting group on the carboxamide nitrogen. Similarly, the term "protected N-(C₁ to C₆ alkyl)carboxamide" means there is an amino-protecting group on the carboxamide nitrogen.

25

30

Examples of such amino-protecting groups include the formyl ("For") group, the trityl group, the phthalimido group, the trichloroacetyl group, the chloroacetyl, bromoacetyl, and iodoacetyl groups, urethane-type blocking groups, such as t-butoxycarbonyl ("Boc"), 2-(4-biphenyl)propyl-2-oxycarbonyl ("Bpoc"), 2-phenylpropyl-2-oxycarbonyl ("Poc"), 2-(4-xenyl)isopropoxycarbonyl, 1,1-diphenylethyl-1-oxycarbonyl, 1,1-diphenylpropyl-1-oxycarbonyl, 2-(3,5-dimethoxyphenyl)propyl-2-oxycarbonyl ("Ddz"), 2-(p-toluy)propyl-2-oxycarbonyl, cyclopentanyloxycarbonyl, 1-methylcyclopentanyloxycarbonyl, cyclohexanyloxy-carbonyl, 1-methylcyclohexanyloxycarbonyl, 2-methylcyclohexanyloxycarbonyl, 2-(4-toluy)sulfonyl-ethoxycarbonyl, 2-(methylsulfonyl)ethoxycarbonyl, 2-(triphenylphosphino)-ethoxycarbonyl, 9-fluorenylmethoxycarbonyl ("Fmoc"), 2-(trimethylsilyl)ethoxycarbonyl, allyloxycarbonyl, 1-(trimethylsilylmethyl)prop-1-enyloxycarbonyl,

40

45

50

55

5-benzisoxalylmethoxycarbonyl, 4-acetoxybenzyl-
oxycarbonyl, 2,2,2-trichloroethoxycarbonyl, 2-ethynyl-2-
propoxycarbonyl, cyclopropylmethoxycarbonyl,
isobornyloxycarbonyl, 1-piperidyloxycarbonyl,
benzyloxycarbonyl ("Cbz"), 4-phenylbenzyloxycarbonyl,
2-methylbenzyloxy-carbonyl, - 2,4,5,-
tetramethylbenzyloxycarbonyl ("Tmz"),
4-methoxybenzyloxycarbonyl, 4-fluorobenzyloxycarbonyl,
4-chlorobenzyloxycarbonyl, 3-chlorobenzyloxycarbonyl,
2-chlorobenzyloxycarbonyl, 2,4-dichlorobenzyl-
oxycarbonyl, 4-bromobenzyloxycarbonyl,
3-bromobenzyloxycarbonyl, 4-nitrobenzyloxy-carbonyl,
4-cyanobenzyloxycarbonyl, 4-(decyloxy)benzyloxycarbonyl
and the like; the benzoylmethylsulfonyl group,
dithiasuccinoyl ("Dts"), the 2-(nitro)phenylsulfenyl
group ("Nps"), the diphenyl-phosphine oxide group and
like amino-protecting groups. The species of amino-
protecting group employed is not critical so long as the
derivatized amino group is stable to the conditions of
the subsequent reaction(s) and can be removed at the
appropriate point without disrupting the remainder of the
compounds. Preferred amino-protecting groups are Boc,
Cbz and Fmoc. Further examples of amino-protecting
groups embraced by the above term are well known in
organic synthesis and the peptide art and are described
by, for example, T.W. Greene and P.G.M. Wuts, "Protective
Groups in Organic Synthesis," 2nd ed., John Wiley and
Sons, New York, NY, 1991, Chapter 7, M. Bodanzsky,
"Principles of Peptide Synthesis," 1st and 2nd revised
ed., Springer-Verlag, New York, NY, 1984 and 1993, and
Stewart and Young, "Solid Phase Peptide Synthesis," 2nd
ed., Pierce Chemical Co., Rockford, IL, 1984, each of
which is incorporated herein by reference. The related
term "protected amino" defines an amino group substituted
with an amino-protecting group discussed above.

5

59

10

The term "protected guanidino" as used herein refers to an "amino-protecting group" on one or two of the guanidino nitrogen atoms. Examples of "protected guanidino" groups are described by T.W. Greene and P.G.M. Wuts; M. Bodanzsky; and Stewart and Young, *supra*.

15

20

25

30

35

40

45

50

The term "carboxy-protecting group" as used herein refers to one of the ester derivatives of the carboxylic acid group commonly employed to block or protect the carboxylic acid group while reactions are carried out on other functional groups on the compound. Examples of such carboxylic acid protecting groups include t-butyl, 4-nitrobenzyl, 4-methoxybenzyl, 3,4-dimethoxybenzyl, 2,4-dimethoxybenzyl, 2,4,6-trimethoxybenzyl, 2,4,6-trimethylbenzyl, pentamethylbenzyl, 3,4-methylenedioxybenzyl, benzhydryl, 4,4'-dimethoxytrityl, 4,4',4"-trimethoxytrityl, 2-phenylpropyl, trimethylsilyl, t-butyl dimethylsilyl, phenacyl, 2,2,2-trichloroethyl, - (trimethylsilyl)ethyl, - (di(n-butyl)methylsilyl)ethyl, p- toluenesulfonylethyl, 4-nitrobenzylsulfonylethyl, allyl, cinnamyl, 1-(trimethylsilylmethyl)-propenyl and like moieties. The species of carboxy-protecting group employed is not critical so long as the derivatized carboxylic acid is stable to the conditions of subsequent reaction(s) and can be removed at the appropriate point without disrupting the remainder of the molecule. Further examples of these groups are found in E. Haslam, "Protective Groups in Organic Chemistry," J.G.W. McOmie, Ed., Plenum Press, New York, NY, 1973, Chapter 5, and T.W. Greene and P.G.M. Wuts, "Protective Groups in Organic Synthesis," 2nd ed., John Wiley and Sons, New York, NY, 1991, Chapter 5, each of which is incorporated herein by reference. A related term is "protected carboxy," which refers to a carboxy group substituted with one of the above carboxy-protecting groups.

5

60

10

15

20

25

30

35

40

45

50

55

The term "hydroxy-protecting group" refers to readily cleavable groups bonded to hydroxyl groups, such as the tetrahydropyranyl, 2-methoxypropyl, 1-ethoxyethyl, methoxymethyl, 2-methoxyethoxymethyl, methylthiomethyl, t-butyl, t-amyl, trityl, 4-methoxytrityl, 4,4'-dimethoxytrityl, 4,4',4"-trimethoxytrityl, benzyl, allyl, trimethylsilyl, (t-butyl)dimethylsilyl, 2,2,2-trichloroethoxycarbonyl groups and the like. The species of hydroxy-protecting groups is not critical so long as the derivatized hydroxyl group is stable to the conditions of subsequent reaction(s) and can be removed at the appropriate point without disrupting the remainder of the molecule. Further examples of hydroxy-protecting groups are described by C.B. Reese and E. Haslam, "Protective Groups in Organic Chemistry," J.G.W. McOmie, Ed., Plenum Press, New York, NY, 1973, Chapters 3 and 4, respectively, and T.W. Greene and P.G.M. Wuts, "Protective Groups in Organic Synthesis," 2nd ed., John Wiley and Sons, New York, NY, 1991, Chapters 2 and 3. Related terms are "protected hydroxy," and "protected hydroxymethyl" which refer to a hydroxy or hydroxymethyl substituted with one of the above hydroxy-protecting groups.

The term "C₁ to C₄ alkylthio" refers to sulfide groups such as methylthio, ethylthio, n-propylthio, isopropylthio, n-butylthio, t-butylthio and like groups.

The term "C₁ to C₄ alkylsulfoxide" indicates sulfoxide groups such as methylsulfoxide, ethylsulfoxide, n-propylsulfoxide, isopropylsulfoxide, n-butylsulfoxide, sec-butylsulfoxide and the like.

The term "C₁ to C₄ alkylsulfonyl" encompasses groups such as methylsulfonyl, ethylsulfonyl, n-propylsulfonyl, isopropylsulfonyl, n-butylsulfonyl, t-butylsulfonyl and the like.

5

61

10

The terms "C₁ to C₄ substituted alkylthio," "C₁ to C₄ substituted alkylsulfoxide," and "C₁ to C₄ substituted alkylsulfonyl," denote the C₁ to C₄ alkyl portion of these groups may be substituted as described above in relation to "substituted alkyl."

15

20

The terms "phenylthio," "phenylsulfoxide," and "phenylsulfonyl" specify a thiol, a sulfoxide, or sulfone, respectively, containing a phenyl group. The terms "substituted phenylthio," "substituted phenylsulfoxide," and "substituted phenylsulfonyl" means that the phenyl of these groups can be substituted as described above in relation to "substituted phenyl."

25

30

35

40

45

The term "C₁ to C₆ alkylaminocarbonyl" means a C₁ to C₆ alkyl attached to a nitrogen of the aminocarbonyl group. Examples of C₁ to C₆ alkylaminocarbonyl include methylaminocarbonyl (from methylisocyanate), ethylaminocarbonyl (from ethylisocyanate), propylaminocarbonyl (from propylisocyanate), butylaminocarbonyl (from butylisocyanate). The term "C₁ to C₆ substituted alkylaminocarbonyl" denotes a substituted alkyl bonded to a nitrogen of the aminocarbonyl group, which alkyl may be substituted as described above in relation to C₁ to C₆ substituted alkyl. Examples of C₁ to C₆ substituted alkylaminocarbonyl include, for example, methoxymethylaminocarbonyl (from methoxymethylisocyanate), 2-chloroethylaminocarbonyl (from 2-chloroethylisocyanate), 2-oxopropylaminocarbonyl (from 2-oxopropylisocyanate), and 4-phenylbutylaminocarbonyl (from phenylbutylisocyanate).

50

30

The term "C₁ to C₇ alkoxy carbonyl" means a "C₁ to C₇ alkoxy" group attached to a carbonyl group. The term "C₁ to C₇ substituted alkoxy carbonyl" denotes a substituted alkoxy bonded to the carbonyl group, which

55

5

62

alkoxy may be substituted as described above in relation to C₁ to C₆ substituted alkyl.

10

The term "phenylaminocarbonyl" means a phenyl
5 attached to a nitrogen of the aminocarbonyl group. The
term "substituted phenylaminocarbonyl" denotes a
substituted phenyl bonded to a nitrogen of the
15 aminocarbonyl group, which phenyl may be substituted as
described above in relation to substituted phenyl.
20 Examples of substituted phenylaminocarbonyl include
2-chlorophenylaminocarbonyl (from
2-chlorophenylisocyanate), 3-chlorophenylaminocarbonyl
(from 3-chlorophenylisocyanate),
2-nitorphenylaminocarbonyl (from
15 2-nitrophenylisocyanate), 4-biphenylaminocarbonyl (from
4-biphenylisocyanate), and 4-methoxyphenylaminocarbonyl
(from 4-methoxyphenylisocyanate).

20

25

30

The term "C₁ to C₆ alkylaminothiocarbonyl" means
a C₁ to C₆ alkyl attached to an aminothiocarbonyl group,
20 wherein the alkyl has the same meaning as defined above.
Examples of C₁ to C₆ alkylaminothiocarbonyl include
methylaminothiocarbonyl (from methylisothiocyanate),
35 ethylaminothiocarbonyl (from ethylisothiocyanate),
propylaminothiocarbonyl (from propylisothiocyanate),
25 butylaminothiocarbonyl (from butylisothiocyanate).

40

The term "C₁ to C₆ substituted
alkylaminothiocarbonyl" denotes a substituted alkyl
bonded to an aminothiocarbonyl group, wherein the alkyl
may be substituted as described above in relation to C₁ to
45 C₆ substituted alkyl. Examples of C₁ to C₆ substituted
alkylaminothiocarbonyl include, for example,
methoxymethylaminothiocarbonyl (from
methoxymethylisothiocyanate),
50 2-chloroethylaminothiocarbonyl (from
35 2-chloroethylisothiocyanate),

55

5

63

10

2-oxopropylaminothiocarbonyl (from
2-oxopropylisothiocyanate), and
4-phenylbutylaminothiocarbonyl (from
phenylbutylisothiocyanate).

15

5 The term "phenylaminothiocarbonyl" means a
phenyl attached to an aminothiocarbonyl group, wherein
the phenyl has the same meaning as defined above.

20

The term "substituted phenylaminothiocarbonyl"
denotes a substituted phenyl bonded to an
aminothiocarbonyl group, wherein phenyl may be
substituted as described above in relation to substituted
phenyl. Examples of substituted
phenylaminothiocarbonyls include
2-chlorophenylaminothiocarbonyl (from
2-chlorophenylisothiocyanate),
3-chlorophenylaminothiocarbonyl (from
3-chlorophenylisothiocyanate),
2-nitrophenylaminothiocarbonyl (from
2-nitrophenylisothiocyanate), 4-biphenylaminothiocarbonyl
(from 4-biphenylisothiocyanate), and
4-methoxyphenylaminothiocarbonyl (from
4-methoxyphenylisothiocyanate).

35

40

The term " C_1 to C_{12} alkylene" means a C_1 to C_{12}
alkyl group where the alkyl radical is bonded at two
positions connecting together two separate additional
groups. Examples of " C_1 to C_{12} alkylene" include
methylene, 1,2-ethyl, 1,1-ethyl, 1,3-propyl.

45

The term "phenylene" means a phenyl group where
the phenyl radical is bonded at two positions connecting
together two separate additional groups. Examples of
"phenylene" includes 1,2-phenylene, 1,3-phenylene, and
1,4-phenylene.

50

55

5

64

10

15

The term "substituted C₁ to C₁₂ alkylene" means a C₁ to C₁₂ alkyl group where the alkyl radical is bonded at two positions connecting together two separate additional groups and further bearing an additional substituent. Examples of "substituted C₁ to C₁₂ alkylene" includes aminomethylene, 1-(amino)-1,2-ethyl, 2-(amino)-1,2-ethyl, 1-(acetamido)-1,2-ethyl, 2-(acetamido)-1,2-ethyl, 2-hydroxy-1,1-ethyl, 1-(amino)-1,3-propyl.

20

25

30

35

40

45

50

55

The term "substituted phenylene" means a phenyl group where the phenyl radical is bonded at two positions connecting together two separate additional groups, wherein the phenyl is substituted as described above in relation to "substituted phenyl." Examples of "substituted phenylene" include thoses derived from the building blocks, namely, 3-methoxy-1,4-phenylene from 4-hydroxy-3-methoxybenzonitrile, 2-fluoro-1,4-phenylene from 2-fluoro-4-hydroxybenzonitrile, 3,5-Dibromo-1,4-phenylene from 3,5-dibromo-4-hydroxybenzonitrile, 3,5-diiodo-1,4-phenylene from 3,5-diiodo-4-hydroxybenzonitrile, 3,4-Dihydroxy-1,2-phenylene from 3,4-dihydroxybenzonitrile, 2,3,5,6-tetrafluoro-1,4-phenylene from 4-hydroxytetrafluorobenzonitrile, 3-bromo-4-hydroxy-1,2-phenylene from 3-bromo-4-hydroxybenzonitrile, 3,5-di-tert-butyl-1,4-phenylene from 3,5-di-tert-butyl-4-hydroxybenzonitrile, 4-hydroxy-3-nitro-1,2-phenylene from 4-hydroxy-3-nitrobenzonitrile, 5-hydroxy-1,3-phenylene from 3,5-dihydroxybenzonitrile, 2-chloro-4-hydroxy-1,4-phenylene from 2-chloro-4-hydroxybenzonitrile, 2-fluoro-1,4-phenylene from 4-cyano-2-fluorophenol, 3,5-dimethyl-1,4-phenylene from 3,5-dimethyl-4-hydroxybenzonitrile, 2,6-dimethyl-1,4-phenylene from 2,6-dimethyl-4-hydroxybenzonitrile, 2,6-dichloro-1,4-phenylene from 2,6-dichloro-4-hydroxybenzonitrile, 4-chloro-1,2-phenylene from 4-chloro-2-hydroxybenzonitrile, 6-nitro-1,2-phenylene from 2-cyano-6-nitro-phenol, 5-nitro-1,2-phenylene from

5

65

10

2-hydroxy-5-nitrobenzonitrile, 2-amino-1,4-phenylene from
2-amino-4-cyanophenol, 2-carboxymethyl-1,4-phenylene from
methyl-2-hydroxy-5-cyano-benzoate, 2-iodo-6-nitro-1,4-
phenylene from 4-cyano-2-iodo-6-nitrophenol.

15

20

25

5 The terms "cyclic C₂ to C₇ alkylene,"
"substituted cyclic C₂ to C₇ alkylene," "cyclic C₂ to C₇
heteroalkylene," and "substituted cyclic C₂ to C₇
heteroalkylene," defines such a cyclic group bonded
("fused") to the phenyl radical resulting in a bicyclic
10 ring system. The cyclic group may be saturated or
contain one or two double bonds. Furthermore, the cyclic
group may have one or two methylene or methine groups
replaced by one or two oxygen, nitrogen or sulfur atoms
which are the cyclic C₂ to C₇ heteroalkylene.

30

35

40

15 The cyclic alkylene or heteroalkylene group may
be substituted once or twice by the same or different
substituents selected from the group consisting of the
following moieties: hydroxy, protected hydroxy, carboxy,
protected carboxy, oxo, protected oxo, C₁ to C₆ acyloxy,
20 formyl, C₁ to C₆ acyl, C₁ to C₆ alkyl, C₁ to C₇ alkoxy,
C₁ to C₆ alkylthio, C₁ to C₆ alkylsulfoxide, C₁ to C₆
alkylsulfonyl, halo, amino, protected amino,
(monosubstituted)amino, protected (monosubstituted)amino,
(disubstituted)amino, hydroxymethyl or a protected
25 hydroxymethyl.

45

50

55

The cyclic alkylene or heteroalkylene group
fused onto the benzene radical can contain two to ten
ring members, but it preferably contains three to six
members. Examples of such saturated cyclic groups are
45 when the resultant bicyclic ring system is 2,3-dihydro-
indanyl and a tetralin ring. When the cyclic groups are
unsaturated, examples occur when the resultant bicyclic
ring system is a naphthyl ring or indolyl. Examples of
fused cyclic groups which each contain one nitrogen atom

5

66

10

15

20

25

30

35

40

45

50

55

and one or more double bond, preferably one or two double bonds, are when the benzene radical is fused to a pyridino, pyrano, pyrrolo, pyridinyl, dihydropyrrolo, or dihydropyridinyl ring. Examples of fused cyclic groups which each contain one oxygen atom and one or two double bonds are when the benzene radical ring is fused to a furo, pyrano, dihydrofurano, or dihydropyrano ring. Examples of fused cyclic groups which each have one sulfur atom and contain one or two double bonds are when the benzene radical is fused to a thieno, thiopyrano, dihydrothieno or dihydrothiopyrano ring. Examples of cyclic groups which contain two heteroatoms selected from sulfur and nitrogen and one or two double bonds are when the benzene radical ring is fused to a thiazolo, isothiazolo, dihydrothiazolo or dihydroisothiazolo ring. Examples of cyclic groups which contain two heteroatoms selected from oxygen and nitrogen and one or two double bonds are when the benzene ring is fused to an oxazolo, isoxazolo, dihydrooxazolo or dihydroisoxazolo ring. Examples of cyclic groups which contain two nitrogen heteroatoms and one or two double bonds occur when the benzene ring is fused to a pyrazolo, imidazolo, dihydropyrazolo or dihydroimidazolo ring or pyrazinyl.

The term "carbamoyl" means an -NCO- group where the radical is bonded at two positions connecting two separate additional groups.

One or more of the compounds of the invention, even within a given library, may be present as a salt. The term "salt" encompasses those salts that form with the carboxylate anions and amine nitrogens and include salts formed with the organic and inorganic anions and cations discussed below. Furthermore, the term includes salts that form by standard acid-base reactions with basic groups (such as amino groups) and organic or inorganic acids. Such acids include hydrochloric,

5

67

10

sulfuric, phosphoric, acetic, succinic, citric, lactic, maleic, fumaric, palmitic, cholic, pantoic, mucic, D-glutamic, D-camphoric, glutaric, phthalic, tartaric, lauric, stearic, salicylic, methanesulfonic, benzenesulfonic, sorbic, picric, benzoic, cinnamic, and like acids.

15

20

25

30

35

40

The term "organic or inorganic cation" refers to counter-ions for the carboxylate anion of a carboxylate salt. The counter-ions are chosen from the alkali and alkaline earth metals, (such as lithium, sodium, potassium, barium, aluminum and calcium); ammonium and mono-, di- and tri-alkyl amines such as trimethylamine, cyclohexylamine; and the organic cations, such as dibenzylammonium, benzylammonium, 2-hydroxyethylammonium, bis(2-hydroxyethyl)ammonium, phenylethylbenzylammonium, dibenzylethylenediammonium, and like cations. See, for example, "Pharmaceutical Salts," Berge et al., J. Pharm. Sci., 66:1-19 (1977), which is incorporated herein by reference. Other cations encompassed by the above term include the protonated form of procaine, quinine and N-methylglucosamine, and the protonated forms of basic amino acids such as glycine, ornithine, histidine, phenylglycine, lysine and arginine. Furthermore, any zwitterionic form of the instant compounds formed by a carboxylic acid and an amino group is referred to by this term. For example, a cation for a carboxylate anion will exist when R₂ or R₃ is substituted with a (quaternary ammonium)methyl group. A preferred cation for the carboxylate anion is the sodium cation.

45

50

The compounds of the invention can also exist as solvates and hydrates. Thus, these compounds may crystallize with, for example, waters of hydration, or one, a number of, or any fraction thereof of molecules of the mother liquor solvent. The solvates and hydrates of

55

5

68

such compounds are included within the scope of this invention.

10

15

20

25

30

35

One or more compounds of the invention, even when in a library, can be in the biologically active ester form, such as the non-toxic, metabolically-labile ester-form. Such ester forms induce increased blood levels and prolong the efficacy of the corresponding non-esterified forms of the compounds. Ester groups which can be used include the lower alkoxymethyl groups, for example, methoxymethyl, ethoxymethyl, isopropoxymethyl and the like; the -(C₁ to C₇) alkoxyethyl groups, for example methoxyethyl, ethoxyethyl, propoxyethyl, isopropoxyethyl and the like; the 2-oxo-1,3-dioxolen-4-ylmethyl groups, such as 5-methyl-2-oxo-1,3-dioxolen-4-ylmethyl, 5-phenyl-2-oxo-1,3-dioxolen-4-ylmethyl and the like; the C₁ to C₄ alkylthiomethyl groups, for example methylthiomethyl, ethylthiomethyl, iso-propylthiomethyl and the like; the acyloxymethyl groups, for example pivaloyloxymethyl, pivaloyloxyethyl, -acetoxymethyl and the like; the ethoxycarbonyl-1-methyl group; the -acetoxylethyl; the 1-(C₁ to C₇ alkyloxycarbonyloxy)ethyl groups such as the 1-(ethoxycarbonyloxy)ethyl group; and the 1-(C₁ to C₇ alkylaminocarbonyloxy)ethyl groups such as the 1-(methylaminocarbonyloxy)ethyl group.

40

45

50

The term "amino acid" includes any one of the twenty naturally-occurring amino acids or the D-form of any one of the naturally-occurring amino acids. In addition, the term "amino acid" also includes other non-naturally occurring amino acids besides the D-amino acids, which are functional equivalents of the naturally-occurring amino acids. Such non-naturally-occurring amino acids include, for example, norleucine ("Nle"), norvaline ("Nva"), L- or D- naphthalanine, ornithine ("Orn"), homoarginine (homoArg) and others well known in the peptide art, such as those described in M. Bodanzsky,

55

5

69

10

15

"Principles of Peptide Synthesis," 1st and 2nd revised ed., Springer-Verlag, New York, NY, 1984 and 1993, and Stewart and Young, "Solid Phase Peptide Synthesis," 2nd ed., Pierce Chemical Co., Rockford, IL, 1984, both of which are incorporated herein by reference. Amino acids and amino acid analogs can be purchased commercially (Sigma Chemical Co.; Advanced Chemtech) or synthesized using methods known in the art.

20

25

30

35

40

The term "functionalized resin" means any resin, crosslinked or otherwise, where functional groups have been introduced into the resin, as is common in the art. Such resins include, for example, those functionalized with amino, alkylhalo, formyl or hydroxy groups. Such resins which can serve as solid supports are well known in the art and include, for example, 4-methylbenzhydrylamine-copoly(styrene-1% divinylbenzene) (MBHA), 4-hydroxymethylphenoxymethyl-copoly(styrene-1% divinylbenzene), 4-oxymethyl-phenyl-acetamido-copoly(styrene-1% divinylbenzene) (Wang), 4-(oxymethyl)-phenylacetamido methyl (Pam), and Tentagel™, from Rapp Polymere GmbH, trialkoxy-diphenyl-methyl ester-copoly(styrene-1% divinylbenzene) (RINK) all of which are commercially available. Other functionalized resins are known in the art and can be used without departure from the scope of the current invention. Such resins may include those described in Jung, G., Combinatorial Peptide and Nonpeptide Libraries, A Handbook (VCH Verlag, 1996) or Bunin, B. A., The Combinatorial Index (Academic Press, 1998) and are incorporated herein by reference.

45

50

As used herein, a "combinatorial library" is an intentionally created collection of differing molecules which can be prepared by the means provided below or otherwise and screened for biological activity in a variety of formats (e.g., libraries of soluble molecules, libraries of compounds attached to resin beads, silica

55

5

70

10

15

chips or other solid supports). A "combinatorial library," as defined above, involves successive rounds of chemical syntheses based on a common starting structure. The combinatorial libraries can be screened in any variety of assays, such as those detailed below as well as others useful for assessing their biological activity. The combinatorial libraries will generally have at least one active compound and are generally prepared such that the compounds are in equimolar quantities.

20

Compounds disclosed in previous work that are not in a mixture are not part of a "combinatorial library" of the invention. In addition, compounds that are in an unintentional or undesired mixture are not part of a "combinatorial library" of the invention.

25

30

35

A combinatorial library of the invention can contain two or more of the above-described compounds. The invention further provides a combinatorial library containing five or more of the above-described compounds. In another embodiment of the invention, a combinatorial library can contain ten or more of the above-described compounds. In yet another embodiment of the invention, a combinatorial library can contain fifty or more of the above-described compounds. If desired, a combinatorial library of the invention can contain 100,000 or more, or even 1,000,000 or more, of the above-described compounds.

40

45

By way of example, the preparation of the combinatorial libraries can use the "split resin approach." The split resin approach is described by, for example, U.S. Patent 5,010,175 to Rutter, WO PCT 91/19735 to Simon, and Gallop et al., *J. Med. Chem.*, 37:1233-1251 (1994), all of which are incorporated herein by reference.

50

55

5

71

10

15

The amino acids are indicated herein by either their full name or by the commonly known three letter code. Further, in the naming of amino acids, "D-" designates an amino acid having the "D" configuration, as opposed to the naturally occurring L-amino acids. Where no specific configuration is indicated, one skilled in the art would understand the amino acid to be an L-amino acid. The amino acids can, however, also be in racemic mixtures of the D- and L-configuration or the D-amino acid can readily be substituted for that in the L-configuration.

20

25

For preparing pharmaceutical compositions containing compounds of the invention, inert, pharmaceutically acceptable carriers are used. The pharmaceutical carrier can be either solid or liquid. Solid form preparations include, for example, powders, tablets, dispersible granules, capsules, cachets, and suppositories.

30

35

A solid carrier can be one or more substances which can also act as diluents, flavoring agents, solubilizers, lubricants, suspending agents, binders, or tablet disintegrating agents; it can also be an encapsulating material.

40

45

In powders, the carrier is generally a finely divided solid which is in a mixture with the finely divided active component. In tablets, the active compound is mixed with the carrier having the necessary binding properties in suitable proportions and compacted in the shape and size desired.

50

For preparing pharmaceutical composition in the form of suppositories, a low-melting wax such as a mixture of fatty acid glycerides and cocoa butter is first melted and the active ingredient is dispersed

55

5

72

therein by, for example, stirring. The molten homogeneous mixture is then poured into convenient-sized molds and allowed to cool and solidify.

10

Powders and tablets preferably contain between about 5% to about 70% by weight of the active ingredient. Suitable carriers include, for example, magnesium carbonate, magnesium stearate, talc, lactose, sugar, pectin, dextrin, starch, tragacanth, methyl cellulose, sodium carboxymethyl cellulose, a low-melting wax, cocoa butter and the like.

15

20

The pharmaceutical compositions can include the formulation of the active compound with encapsulating material as a carrier providing a capsule in which the active component (with or without other carriers) is surrounded by a carrier, which is thus in association with it. In a similar manner, cachets are also included. Tablets, powders, cachets, and capsules can be used as solid dosage forms suitable for oral administration.

25

30

Liquid pharmaceutical compositions include, for example, solutions suitable for oral or parenteral administration, or suspensions, and emulsions suitable for oral administration. Sterile water solutions of the active component or sterile solutions of the active component in solvents comprising water, ethanol, or propylene glycol are examples of liquid compositions suitable for parenteral administration.

35

40

Sterile solutions can be prepared by dissolving the active component in the desired solvent system, and then passing the resulting solution through a membrane filter to sterilize it or, alternatively, by dissolving the sterile compound in a previously sterilized solvent under sterile conditions.

45

50

55

5

73

10

15

Aqueous solutions for oral administration can be prepared by dissolving the active compound in water and adding suitable flavorants, coloring agents, stabilizers, and thickening agents as desired. Aqueous suspensions for oral use can be made by dispersing the finely divided active component in water together with a viscous material such as natural or synthetic gums, resins, methyl cellulose, sodium carboxymethyl cellulose, and other suspending agents known to the pharmaceutical formulation art.

20

25

30

Preferably, the pharmaceutical composition is in unit dosage form. In such form, the composition is divided into unit doses containing appropriate quantities of the active Oxadiazole. The unit dosage form can be a packaged preparation, the package containing discrete quantities of the preparation, for example, packeted tablets, capsules, and powders in vials or ampules. The unit dosage form can also be a capsule, cachet, or tablet itself, or it can be the appropriate number of any of these packaged forms.

35

40

45

50

As pharmaceutical compositions for treating infections, pain, or any other indication the compounds of the present invention are generally in a pharmaceutical composition so as to be administered to a subject at dosage levels of from 0.7 to 7000 mg per day, and preferably 1 to 500 mg per day, for a normal human adult of approximately 70 kg of body weight, this translates into a dosage of from 0.01 to 100 mg/kg of body weight per day. The specific dosages employed, however, can be varied depending upon the requirements of the patient, the severity of the condition being treated, and the activity of the compound being employed. The determination of optimum dosages for a particular situation is within the skill of the art.

55

5

74

10

The compounds of Formula (I) and combinatorial libraries containing the same can be prepared as set forth in the Reaction Schemes provided in the Reaction Schemes 2 through 5 and described below.

15

20

25

30

35

5 Several variant oxadiazole combinatorial libraries have been prepared in order to achieve a high level of diversity. Different types of nitrile containing substrates were attached to solid support. Among the available nitriles, those containing a carboxylic acid moiety were coupled to a resin-bound amine via an amide bond (Scheme 1: Attachment of Cyanocarboxylic acids to solid support). The carboxylic acid was coupled directly to a resin bound primary amine such as methyl benzhydrylamine (MBHA), or RINK amide linker or other resins known in the art which afford a primary amide functional group after cleavage. Alternatively the cyano carboxylic acids were coupled to resin-bound primary or secondary amines which become incorporated into the product as secondary or tertiary amides after cleavage from the resin. These could be prepared by reductive amination of a primary amine to an aldehyde resin or vice-versa, or to any other resin-bound primary or secondary amine prepared by methods known to those skilled in the art.

40

45

50

25 Cyanophenols were coupled to solid support via an ether linkage as shown in Scheme 2: Attachment of cyanophenols to solid support which releases the free phenol after cleavage, by alkylation of a benzyl halide resin such as Merrifield resin or alkoxybenzyl bromide resin (Wang bromide resin). Alternatively, the cyanophenols were coupled to an alkyl halide moiety which remains covalently attached to the oxadiazole product after cleavage from the resin. For example, a primary or secondary amine bound to the resin through a cleavable linker is acylated with chloroacetic anhydride or 3- or

55

5

75

10

4-chloromethyl benzoic acid. A cyanophenol was then introduced by nucleophilic displacement of the alkyl halide. In this way, a wide range of cyanophenyl compounds was made, and converted to oxadiazole compounds by the methods described below.

15

20

25

30

35

Other types of nitrile containing compounds can be similarly linked to common resins as shown in Scheme 3: Linking nitriles to solid support. For example, 3-cyanophenyl isocyanate and 4-cyanophenyl isocyanate were linked to the resin by forming a urea linkage and the nitrile function elaborated into an oxadiazole. Additionally, cyanohydrins may be formed on the resin by the action of Trimethylsilyl cyanide on resin-bound aldehydes and ketones. Alkyl nitriles may be formed by displacement of leaving groups with cyanide anion. Primary and secondary amines attached to the resin were alkylated with 3- and 4-cyanobenzylbromide, and the cyanobenzylamines converted to oxadiazoles. Because of the relatively low number of suitable commercially available nitriles, N-Boc 2-cyanoethyl glycine was also found to be a useful precursor to a large number of oxadiazole derivatives. The cyanoethyl group was first converted to the oxadiazole followed by conversion of the Boc-protected amine to a variety of derivatives.

40

45

50

In order to provide further diversity, conversion of the nitrile function into the oxadiazole ring was done following a number of methods (Scheme 4: Conversion of Nitriles into Oxadiazoles). Treatment of the nitriles with hydroxylamine in alcohol solvent provided the amidoximes in quantitative yield. The amidoximes were then treated with different types of acylating agents to give 3,5-substituted oxadiazoles. In a first embodiment, the amidoximes were treated with trichloroacetic anhydride to give the 5-trichloromethyl derivatives which were further reacted with secondary

55

amines to give 5-amino oxadiazoles by displacement of the trichloromethyl group. Alternatively, the amidoximes were treated with chloroacetic anhydride to give the 5-chloromethyl oxadiazoles. This primary chloride could be displaced with diverse primary or secondary amines to give substituted 2° or 3° amines. These could be derivatized further to introduce an additional variable substituent. This strategy was particularly useful for the preparation of compounds attached to the resin by TFA labile bonds which preclude the use of N-Boc-protected amino acids (vide infra). This was also the method of choice with cyanoethyl glycine derivatives. Third, the amidoximes were converted to oxadiazoles by reaction with BOC amino acid anhydrides or FMOC amino acid anhydrides to give the substituted oxadiazole derivatives. Natural L-amino acid derivatives (e.g. Gly, Phe, Leu) were used as well as D- or L-amino acids, cyclic amino acids (e.g. Pro, Nippecotic acid, Isonippecotic acid, tetrahydroisoquinoline carboxylic acid), unnatural amino acids, or other aliphatic carboxylic acids and anhydrides. In all cases, the carboxylic acid moiety becomes incorporated into the oxadiazole ring.

Furthermore, the N-BOC or N-FMOC protecting group could be removed under standard conditions and the resulting amine derivatized with an additional diverse set of reagents (Scheme 5: Derivatization of Oxadiazoles). For example amide, sulfonamide, urea and thiourea derivatives were obtained by reaction with acid anhydride, sulfonyl chloride, isocyanates and isothiocyanates respectively. Fourth, the amidoximes can be reacted with activated carboxylic acid derivatives other than anhydrides. Any acylating reagent known in the art could be used in the synthesis of oxadiazoles, including but not limited to acid chlorides, and fluorides, mixed anhydrides, active esters such as

5 pentafluorophenyl, 4-nitrophenyl, hydroxybenzotriazole,
N-hydroxysuccinimide and the like.

10 In general, large diverse combinatorial
libraries of oxadiazole compounds were prepared by
5 assembling the three sets of building blocks in all
possible permutations. Thus the libraries are described
15 as having three variable positions, or three diversity
sites. In one embodiment of these methods, the first
20 diversity site is defined by the nitrile containing
moiety, or its precursor, attached to the resin. This
includes, but is not limited to, cyanocarboxylic acids,
cyanobenzyl halides and cyanophenols, and the coupling of
these through appropriate chemistry to diverse compounds
on solid support. Additionally, these methods are meant
25 to include as starting materials other products
synthesized on solid phase whereby an aliphatic, aromatic
or heteroaromatic nitrile compound is obtained. The
second diversity site is introduced in the oxadiazole
30 formation and is defined by the appropriately
functionalized carboxylic acid anhydride used in the
cyclization step. The third diversity site is created by
the derivatization of a reactive site introduced by the
35 carboxylic acid moiety in the previous step. More
specifically, the use of protected amino acid derivatives
25 is particularly useful in the present invention. The
amino acid side chain provides the second diversity site
as defined above. Derivatization of the amino group with
40 carboxylic acids, sulfonyl chlorides, isocyanates,
isothiocyanates, alkyl halides or aldehydes provides the
30 third diversity site. Other reactive functional groups
incorporated in protected or unprotected form can also
45 serve to introduce the third diversity element. In
another embodiment of the invention, bifunctional
carboxylic acid derivatives are used to form the
50 oxadiazole ring and an attachment point for a third
diversity site. This attachment point can be a

5 nucleophilic site (e.g. alcohol, thiol, carbon
nucleophile, etc.) or an electrophilic site (halide,
tosylate, triflate, activated carboxylate, etc). In
10 particular, cyclic anhydrides such as succinic anhydride,
5 diglycolic anhydride, 1,2-cyclopropane dicarboxylic
anhydride are preferred embodiments. The oxadiazole
cyclization produces a pendant carboxylic acid which can
15 be further activated with standard coupling reagents and
coupled to diverse amines. Another preferred embodiment
10 of the invention is the use of chloroacetic anhydride or
other halocarboxylic acid anhydrides in the oxadiazole
20 cyclization creating a chloromethyl group which is
readily displaced with diverse nucleophiles such as
amines, thiols, alcohols, phenols or carbon nucleophiles.
15 In a most preferred embodiment primary amines or
secondary diamines are used which are derivatized further
25 with carboxylic acids, sulfonyl chlorides, isocyanates,
isothiocyanates or alkyl halides.

30 The synthesis of oxadiazoles on solid support
20 could also be performed in the opposite orientation. A
carboxylic acid moiety could be attached to the solid
support in a variety of different ways, for example, an
35 amino acid ester is attached to a resin by reductive
amination, or by reaction with a chloroformate resin
25 derivative, followed by hydrolysis of the ester.
Alternatively, a resin bound amine can be reacted with a
40 cyclic anhydride such as succinic anhydride. Other
methods of providing a free carboxylic acid on solid
support are known in the art. The carboxylic acid is
30 then converted to an activated derivative such as the
mixed anhydride with isobutyl chloroformate, or an active
45 ester with pentafluorophenol, 4-nitrophenol, N-
hydroxysuccinimide, HOBT or other activated derivatives
such as those used routinely in the formation of amide or
35 ester bonds. This activated resin bound carboxylate is
then treated immediately with a solution of amidoxime,

5

79

prepared by the reaction of a nitrile compound with hydroxylamine under standard conditions.

10

15

20

25

The nonsupport-bound combinatorial libraries can be screened as mixtures in solution in assays such as radio-receptor inhibition assays, anti-bacterial assays, anti-fungal assays, calmodulin-dependent phosphodiesterase (CaMPDE) assays and phosphodiesterase (PDE) assays, as described in detail below. Deconvolution of highly active mixtures can then be carried out by iterative or positional scanning methods. These techniques, the iterative approach or the positional scanning approach, can be utilized for finding other active compounds within the combinatorial libraries of the present invention using any one of the below-described assays or others well known in the art.

30

35

40

45

50

55

The iterative approach is well-known and is set forth in general in Houghten et al., *Nature*, 354, 84-86 (1991) and Dooley et al., *Science*, 266, 2019-2022 (1994), both of which are incorporated herein by reference. In the iterative approach, for example, sub-libraries of a molecule having three variable groups are made wherein the first variable is defined. Each of the compounds with the defined variable group is reacted with all of the other possibilities at the other two variable groups. These sub-libraries are each tested to define the identity of the second variable in the sub-library having the highest activity in the screen of choice. A new sub-library with the first two variable positions defined is reacted again with all the other possibilities at the remaining undefined variable position. As before, the identity of the third variable position in the sub-library having the highest activity is determined. If more variables exist, this process is repeated for all variables, yielding the compound with each variable contributing to the highest desired activity in the

5

80

10

screening process. Promising compounds from this process can then be synthesized on larger scale in traditional single-compound synthetic methods for further biological investigation.

5

15

The positional-scanning approach has been described for various combinatorial libraries as described, for example, in R. Houghten et al.

20

PCT/US91/08694 and U.S. Patent 5,556,762, both of which are incorporated herein by reference. In the positional scanning approach, sublibraries are made defining only one variable with each set of sublibraries and all possible sublibraries with each single variable defined (and all other possibilities at all of the other variable positions), made and tested. From the instant description one skilled in the art could synthesize combinatorial libraries wherein two fixed positions are defined at a time. From the testing of each single-variable defined combinatorial library, the optimum substituent at that position can be determined, pointing to the optimum or at least a series of compounds having a maximum of the desired biological activity. Thus, the number of sublibraries for compounds with a single position defined will be the number of different substituents desired at that position, and the number of all the compounds in each sublibrary will be the product of the number of substituents at each of the other variables.

30

35

40

45

50

55

Individual compounds and pharmaceutical compositions containing the compounds, as well as methods of using the same, are included within the scope of the present invention. The compounds of the present invention can be used for a variety of purposes and indications and as medicaments for any such purposes and indications. For example, as described above, compounds of the present invention, including oxadiazole

5 derivatives, can be used as pesticides, acaricides,
receptor agonists and antiviral agents. Additionally,
10 the subject compounds can be useful as analgesics.
Assays which can be used to test the biological activity
5 of the instant compounds include antimicrobial assays, a
competitive enzyme-linked immunoabsorbent assay and
radio-receptor assays, as described below.

15 The ability of the compounds to inhibit
bacterial growth, and therefore be useful to that
20 infection, can be determined by methods well known in the
art. Compounds of the present invention were shown to
have antimicrobial activity by the *in vitro* antimicrobial
activity assay described in Example 36 below and,
therefore, are useful as antimicrobial agents.

25 In addition, an exemplary *in vitro*
antimicrobial activity assay is described in Blondelle
and Houghten, *Biochemistry* 30:4671-4678 (1991), which is
30 incorporated herein by reference. In brief,
Staphylococcus aureus ATCC 29213 (Rockville, MD) is grown
20 overnight at 37°C in Mueller-Hinton broth, then re-
inoculated and incubated at 37°C to reach the exponential
35 phase of bacterial growth (i.e., a final bacterial
suspension containing 10^5 to 5×10^5 colony-forming
units/ml). The concentration of cells is established by
25 plating 100 μ l of the culture solution using serial
dilutions (e.g., 10^{-2} , 10^{-3} and 10^{-4}) onto solid agar
40 plates. In 96-well tissue culture plates, compounds,
individual or in mixtures, are added to the bacterial
suspension at concentrations derived from serial two-fold
45 dilutions ranging from 1500 to 2.9 μ g/ml. The plates are
30 incubated overnight at 37°C and the growth determined at
each concentration by OD₆₂₀ nm. The IC₅₀ (the
concentration necessary to inhibit 50% of the growth of
50 the bacteria) can then be calculated.

5

82

10

15

20

25

30

35

40

The competitive ELISA method which can be used here is a modification of the direct ELISA technique described previously in Appel et al., *J. Immunol.* 144:976-983 (1990), which is incorporated herein by reference. It differs only in the MAb addition step. Briefly, multi-well microplates are coated with the antigenic peptide (Ac-GASPYPNLSNQQT-NH₂) at a concentration of 100 pmol/50 μ l. After blocking, 25 μ l of a 1.0 mg/ml solution of each mixture of a synthetic combinatorial library (or individual compound) is added, followed by MAb 125-10F3 (Appel et al., *supra*) (25 μ l per well). The MAb is added at a fixed dilution in which the bicyclic guanidine in solution effectively competes for MAb binding with the antigenic peptide adsorbed to the plate. The remaining steps are the same as for direct ELISA. The concentration of compound necessary to inhibit 50% of the MAb binding to the control peptide on the plate (IC₅₀) is determined by serial dilutions of the compound.

20

Alternative screening can be done with radio-receptor assays. The radio-receptor assay, can be selective for any one of the μ , κ , or δ opiate receptors. Compounds of the present invention can be useful in vitro for the diagnosis of relevant opioid receptor subtypes, such as κ , in the brain and other tissue samples. Similarly, the compounds can be used *in vivo* diagnostically to localize opioid receptor subtypes.

45

50

The radio-receptor assays are also an indication of the compounds' analgesic properties as described, for example, in Dooley et al., *Proc. Natl. Acad. Sci.*, 90:10811-10815 (1993). For example, it can be envisioned that these compounds can be used for therapeutic purposes to block the peripheral effects of a centrally acting pain killer. For instance, morphine is

55

5

83

10

15

20

a centrally acting pain killer. Morphine, however, has a number of deleterious effects in the periphery which are not required for the desired analgesic effects, such as constipation and pruritus (itching). While it is known that the many compounds do not readily cross the blood-brain barrier and, therefore, elicit no central effect, the subject compounds can have value in blocking the periphery effects of morphine, such as constipation and pruritus. Accordingly, the subject compounds can also be useful as drugs, namely as analgesics, or to treat pathologies associated with other compounds which interact with the opioid receptor system.

25

Additionally, such compounds can be tested in a σ receptor assay. Ligands for the σ receptor can be useful as antipsychotic agents, as described in Abou-Gharbia et al., *Annual Reports in Medicinal Chemistry*, 28:1-10 (1993).

30

35

40

45

50

55

Radio-receptor assays can be performed with particulate membranes prepared using a modification of the method described in Pasternak et al., *Mol. Pharmacol.* 11:340-351 (1975), which is incorporated herein by reference. Rat brains frozen in liquid nitrogen can be obtained from Rockland (Gilbertsville, PA). The brains are thawed, the cerebella removed and the remaining tissue weighed. Each brain is individually homogenized in 40 ml Tris-HCl buffer (50 mM, pH 7.4, 4°C) and centrifuged (Sorvall® RC5C SA-600: Du Pont, Wilmington, DE) (16,000 rpm) for 10 minutes. The pellets are resuspended in fresh Tris-HCl buffer and incubated at 37°C for 40 minutes. Following incubation, the suspensions are centrifuged as before, the resulting pellets resuspended in 100 volumes of Tris buffer and the suspensions combined. Membrane suspensions are prepared and used in the same day. Protein content of the crude homogenates generally range from 0.15-0.2 mg/ml as

determined using the method described in Bradford, M.M.,
Anal. Biochem. 72:248-254 (1976), which is incorporated
herein by reference.

Binding assays are carried out in polypropylene
tubes, each tube containing 0.5 ml of membrane
suspension. 8 nM of ^3H -[D-Ala²,Me-Phe⁴,Gly-ol⁵]enkephalin
(DAMGO) (specific activity = 36 Ci/mmol, 160,000 cpm per
tube; which can be obtained from Multiple Peptide
Systems, San Diego, CA, through NIDA drug distribution
program 271-90-7302) and 80 $\mu\text{g}/\text{ml}$ of bicyclic guanidine,
individual or as a mixture and Tris-HCl buffer in a total
volume of 0.65 ml. Assay tubes are incubated for 60
mins. at 25°C. The reaction is terminated by filtration
through GF-B filters on a Tomtec harvester (Orange, CT).
The filters are subsequently washed with 6 ml of Tris-HCl
buffer, 4°C. Bound radioactivity is counted on a
Pharmacia Biotech Betaplate Liquid Scintillation Counter
(Piscataway, NJ) and expressed in cpm. To determine
inter- and intra-assay variation, standard curves in
which ^3H -DAMGO is incubated in the presence of a range of
concentrations of unlabeled DAMGO (0.13-3900 nM) are
generally included in each plate of each assay (a 96-well
format). Competitive inhibition assays are performed as
above using serial dilutions of the bicyclic guanidines,
individually or in mixtures. IC_{50} values (the
concentration necessary to inhibit 50% of ^3H -DAMGO
binding) are then calculated. IC_{50} values of less than
1000 nM are indicative of highly active opioid compounds
which bind to the μ receptor, with particularly active
compounds having IC_{50} values of 100 nM or less and the
most active compounds with values of less than 10 nM.

As opposed to this μ receptor selective assay,
which can be carried out using ^3H -DAMGO as radioligand, as
described above, assays selective for κ receptors can be
carried out using [^3H]-U69,593 (3 nM, specific activity 62

5

85

10

Ci/mmol) as radioligand. Assays selective for δ opiate receptors can be carried out using tritiated DSLET ([D-Ser², D-Leu³]-threonine-enkephalin) as radioligand. Assays selective for the σ opiate receptor can use radiolabeled pentazocine as ligand.

15

Screening of combinatorial libraries and compounds of the invention can be done with an anti-fungal assay. Compounds of the present invention can be useful for treating fungal infections.

20

10 Screening of combinatorial libraries and compounds of the invention also can be done with a calmodulin-dependent phosphodiesterase (CaMPDE) assay. Compounds of the present invention can be useful as calmodulin antagonists.

25

30

15 Calmodulin (CaM), which is the major intracellular calcium receptor, is involved in many processes that are crucial to cellular viability. In particular, calmodulin is implicated in calcium-stimulated cell proliferation. Calmodulin antagonists are, therefore, useful for treating conditions associated with increased cell proliferation, for example, cancer. In addition, calmodulin antagonists such as compounds of the subject invention are useful both in vitro and in vivo for identifying the role of calmodulin in other biological processes. The disadvantages of known antagonists such as trifluoperazine and N-(4-aminobutyl)-5-chloro-2-naphthalenesulfonamide (W13) include their non-specificity and toxicity. In contrast, advantages of the combinatorial libraries and compounds of the subject invention as calmodulin antagonists include their reduced flexibility and ability to generate broader conformational space of interactive residues as compared to their linear counterparts.

40

45

50

55

An example of an assay that identifies CaM antagonists is a CaMPDE assay. In brief, samples are mixed with 50 μ l of assay buffer (360 mM Tris, 360 mM Imidazole, 45 mM $\text{Mg}(\text{CH}_3\text{COO})_2$, pH 7.5) and 10 μ l of CaCl_2 (4.5 mM) to a final volume of 251 μ l. 25 μ l of calmodulin stock solution (Boehringer Mannheim; 0.01 $\mu\text{g}/\mu\text{l}$) is then added and the samples then sit at room temperature for 10 minutes. 14 μ l of PDE (Sigma; 2 Units dissolved in 4 ml of water; stock concentration: 0.0005 Units/ μ l) is then added, followed by 50 μ l of 5'-nucleotidase (Sigma; 100 Units dissolved in 10 ml of 10 mM Tris-HCl containing 0.5 mM $\text{Mg}(\text{CH}_3\text{COO})_2$, pH 7.0; stock concentration: 10 Units/ml). The samples are then incubated for 10 minutes at 30°C. 50 μ l of adenosine 3',5'-cyclic monophosphate (cAMP) (20 mM in water at pH 7.0) is added, the samples incubated for 1 hour at 30°C and then vortexed. 200 μ l of trichloroacetic acid (TCA) (55% in water) is added to a 200 μ l sample aliquot, which is then vortexed and centrifuged for 10 minutes. 80 μ l of the resulting supernatants of each sample is transferred to a 96-well plate, with 2 wells each containing 80 μ l of each sample. 80 μ l of ammonium molybdate (1.1% in 1.1N H_2SO_4) is then added to all the wells, and the OD of each were determined at 730nm, with the values later subtracted to the final OD reading. 16 μ l of reducing agent (6g sodium bisulfite, 0.6g sodium sulfite and 125mg of 1-amino-2-naphtol-4-sulfonic acid in 50ml of water) is then added to one of each sample duplicate and 16 μ l of water is added to the other duplicate. After sitting for 1 hour at room temperature, the OD of each well is determined at 730nm. The percent inhibition of calmodulin activity is then calculated for each sample, using as 0% inhibition a control sample containing all reagents without any test samples and as 100% inhibition a control sample containing test samples and all reagents except calmodulin. In addition, the percent inhibition of phosphodiesterase activity was

determined by following a similar protocol as the CaMPDE assay described above, except not adding calmodulin to the sample mixture and calculating the percent inhibition by using as 0% inhibition a control reagent without any test samples and as 100% inhibition a control sample containing test samples and all reagents except CaMP.

EXAMPLES

Experimental Procedures

The following Examples are intended to illustrate but not limit the present invention. The following abbreviations are used the following experimental procedures and examples: DMA, dimethyl acetamide; RT, room temperature; DMF, dimethylformamide; IPA, isopropyl alcohol; Wang resin, p-benzyloxybenzylalcohol-polystyrene; DCM, dichloromethane; MTBE, methyl-tert-butyl ether; MBHA-HCl resin, methyl-benzhydrylamine hydrochloride; PP, polypropylene; DIEA, diisopropylethylamine; HOBT, 1-hydroxybenzotriazole; DIC, N,N'-diisopropylcarbodiimide; DMAP, 4-dimethylamino-pyridine; KotBu, potassium tert-butoxide; Boc, tert-butoxycarbonyl; FMOC, 9-fluorenyl-methoxycarbonyl; Tos, p-toluenesulfonyl; Bzl, benzyl; For, formyl; PMC, 2,2,5,7,8-pentamethylchroman-6-sulfonyl; TBU, 2-(1H-benzotriazole-1-yl)-1,1,3,3-tetramethyluronium tetrafluoroborate; TRT, trityl; ACM, acetamidomethyl; MTR, 2,3,6-trimethyl-4-methoxybenzenesulfonyl; MBH, 4,4'-dimethoxybenzylhydrazide; ADA, adamanyl; PMEOBZL, p-methoxybenzyl; 2-CL-Z, 2-chlorobenzyl-oxycarbonyl; 2-BR-Z, 2-bromobenzyl-oxycarbonyl; TMOB, 2,4,6-trimethoxybenzyl; MTT, 4-methyltrityl; PBF, 2,2,4,6,7-pentamethyldihydrobenzofuran-5-sulfonyl; DDE, 1-(4,4-dimethyl-2,6-dioxocyclohex-1-ylidene)ethyl; DMAB, 4-[N-(1-(4,4-dimethyl-2,6-dioxocyclohex-1-ylidene)-3-methylbutyl)-amino]benzyl; TFA, trifluoroacetic acid;

5

88

10

15

20

BOP, benzotriazol-1-yl-oxy-tris(dimethylamino)-phosphonium hexafluoro-phosphate; PyBOP, benzotriazol-1-yl-oxy-tris-pyrrolidino-phosphonium hexafluorophosphate; HATU, azabenzotriazolyl-N,N,N',N'-tetramethyluronium hexafluorophosphate; HBTU, 2-(1H-benzotriazole-1-yl)-1,1,3,3-tetramethyluronium hexafluorophosphate; MeOH, methanol; ACN, acetonitrile; DCE, 1,2-dichloroethane; THF, tetrahydrofuran; HF, hydrogen fluoride; HPLC/MS, high performance liquid chromatography - mass spectrometry; FIA-MS, flow injection analysis - mass spectrometry; ELSD, evaporative light scattering detector; THB, Todd Hewitt Broth; OD, optical density; DMSO, dimethylsulfoxide.

EXAMPLE 1

25

15 Synthesis of 4-alkoxy-2-methoxybenzaldehyde resin (DAB resin)

30

35

40

Chloromethyl polystyrene (500 g, 1.48 mmol/g, 740 mmol) was swollen in Dimethyl acetamide. 4-hydroxy-2-methoxybenzaldehyde (250g, 1645 mmol) was dissolved in 400 ml DMA and potassium t-butoxide was added (185 g, 1645 mmol) in portions. The green solution was added to the loose resin and the suspension was shaken overnight at 50 °C. The solution was cooled to RT, and the resin transferred to teabags washed with 2 l portions of DMF (1X), and 5%, 10% and 20% H₂O in DMF (4X each), IPA and MeOH (3X). The resin was dried, to give 4-alkoxy-2-methoxybenzaldehyde polystyrene resin.

EXAMPLE 2

45

Preparation of Wang bromide resin

50

30 Wang resin (20 g, 24 mmol) was swollen in DCM. A solution of triphenylphosphine dibromide (30.4g, 72 mmol) in 500 ml DCM was added and the solution shaken for 3 hours or overnight. The resin was washed with DCM and

55

5

89

MTBE and dried under vacuum, to give 4-alkoxybenzyl bromide polystyrene resin.

10

EXAMPLE 3

Coupling of Nitrile Carboxylic acids to MBHA Resin

5 MBHA-HCl resin (Methylbenzhydramine
15 Hydrochloride) (125 g, 162.5 mmol NH₂) was dispensed into
15 10X15 cm PP mesh bags (8.33 g/bag). The resin was
washed 3X with 5% DIEA/ DCM then 2X with DCM. The
20 carboxylic acids below were dissolved in 500 ml DCM in
10 separate Nalgene bottles. DIEA (28.3 ml, 162.5 mmol) and
HOBT (24.9 g, 162.5 mmol) added to each. Once dissolved,
A and B were cooled to -10-C, C, D, and E were left at RT.
DIC (25.4 ml, 162.5 mmol) was added in 5 ml portions over
25 1 hr to each bottle. Once the addition of DIC was
15 complete, 3 bags were added to each bottle, and the
solutions shaken overnight at RT. The bags were then
removed from the anhydride solutions and washed 3X with
30 DCM, 3X with MeOH and dried to yield the carboxynitrile
attached to the resin through a carboxamide linkage.
20 Kaiser test of the resins was negative.

35

List of Cyano Carboxylic Acids.

Resin A Cyanoacetic acid: 13.8 g, 162.5 mmol

40

Resin B 1-Cyano-1-cyclopropane carboxylic acid: 18.1 g,
162.5 mmol

25 Resin C 3-Cyanobenzoic acid: 23.9 g, 162.5 mmol

45

Resin D 4-Cyanobenzoic acid: 23.9 g, 162.5 mmol

30 Resin E 2-(4-Cyanophenoxy)-2-methyl propionic acid:
33.3 g, 162.5 mmol

50

EXAMPLE 4

55

5

Preparation of DAB resin bound amines
by reductive amination
(Type 1 amines)

10

A 200 mg portion of DAB resin in a teabag was
5 swollen in DMF + 1% AcOH. The amine or amine salt was
added (0.25M amine) and the solutions shaken at RT for 1
15 hour. Sodium cyanoborohydride was then added (0.25 M)
and the solution shaken at RT overnight. The supernatant
was poured off and the resin washed with DMF (4X), MeOH
10 (4X) and DCM (2X) to yield secondary amines on resin.

20

List of amines:

Isobutylamine
Benzylamine
25 Glycine t-butyl ester hydrochloride
15 1-(3-aminopropyl) imidazole

30

EXAMPLE 5

Preparation of Wang resin bound diamines (Type 2 amines)

35

Wang resin (100 g, 120 mmol) was swollen in DCM
for 15 min and the excess poured off. A solution of
20 carbonyl diimidazole (100 g, 0.5 mol) in 800 ml DCM was
added and shaken for 3 hours. The solvent was poured off
and the resin washed with DCM (2X) then a solution of
40 anhydrous piperazine (43 g, 0.5 mol) in 800 ml DCM was
added, and the solution shaken overnight. The
25 supernatant was removed, and the resin washed with DCM,
IPA, DMF, IPA and MeOH to yield piperazine linked to
45 resin. The same procedure is followed with the
following diamines:

1,10-diaminodecane
50 30 1,11-diaminoundecane

3,3-oxetanebis(methylamine)dihydrobromide
4,4'-diaminodicyclohexylmethane
5-amino-2,2,4-trimethyl-1-cyclopentanemethylamine
20 9,9-bis(3-aminopropyl)fluorene
Trans-1,2-diaminocyclohexane
Trans-1,4-diaminocyclohexane

EXAMPLE 6

- Acylation of resin bound amines with
25 Cyanocarboxylic acids

To a solution of 4-cyanobenzoic acid (27 mmol, 4.0g) in 45 ml DCM/DMF (2:1) was added DIC (2.11 ml, 13.5 mmol). The solution was shaken 10 min, then DIEA (2.34 ml, 13.5 mmol) and DMAP (1.0 mmol, 120 mg) were added.
30 The teabags containing resin-bound amines from Examples 4 and 5 were then added and the solution shaken overnight. The bags were washed with DCM, DMF, DCM and MeOH, then dried to yield 4-cyanobenzamide resin.
Other acids used:

5

92

10

Cyanoacetic acid
1-Cyano-1-cyclopropane carboxylic acid
3-Cyanobenzoic acid
2-(4-Cyanophenoxy)-2-methyl propionic acid

5

EXAMPLE 7

15

Acylation of resin bound amines
with halocarboxylic acids

20

A teabag containing 100 g of resin bound
piperazine from Examples 5 (120 mmol) was swollen in DCM
and a solution of chloroacetic anhydride (41 g, 240 mmol)
in 500 ml DCM was added, followed by DIEA (42 ml, 240
mmol). The solution was shaken at RT overnight, and
washed with DCM, DMF, IPA and MeOH and dried to yield 4-
chloroacetyl piperazine bound resin. Other primary and
secondary amines of Example 4 and 5 are also used.

25

30

The halo carboxylic acids shown below can be
substituted for chloroacetic anhydride and used in a
similar manner, such as, preparing the anhydride of the
carboxylic acid with diisopropyl carbodiimide in DCM for
30 minutes before addition of the amine resin.

15

EXAMPLE 8

Alkylation of resin bound amines with
cyanobenzyl bromides

A teabag containing 300 g of resin bound amine
from Examples 4 and 5 (360 mmol) was swollen in DMF
(1.5l) and 4-cyanobenzyl bromide (200g, 1.02 mmol) was
added, followed by DIEA (177 ml, 1.02 mol). The solution
was shaken at RT overnight and then washed with DCM, IPA
and MeOH. The resin was dried under high vacuum to
provide N-(4-cyano)benzylamine bound resin.

25

3-Cyanobenzyl bromide was used under the same
conditions.

EXAMPLE 9

Coupling of Cyanophenols to Wang bromide resin

Wang bromide resin (70 g, 70 mmol) was washed
with Dimethylacetamide (DMA). 4-cyanophenol (25g, 210
mmol) was dissolved in 500 ml DMA, and KOtBu (23.5 g, 210
mmol) was added in portions. The solution of phenolate

5

94

10

was added in one portion to the swollen resin and heated to 50-C overnight. The mixture was cooled and the resin was washed with DMF/H₂O (4:1), DMF and MeOH 4 times each. The resin was then dried under vacuum to give 4-cyanophenol bound to resin via an ether linkage.

15

The following phenols were used in the same conditions:

20

25

30

35

40

45

50

55

4-hydroxy-3-methoxybenzonitrile
4-cyanophenol
2-fluoro-4-hydroxybenzonitrile
3-cyanophenol
4-cyano-4'-hydroxybiphenyl
2-cyanophenol
3,5-dibromo-4-hydroxybenzonitrile
4-hydroxybenzyl cyanide
3,5-diiodo-4-hydroxybenzonitrile
3,4-dihydroxybenzonitrile
4-hydroxytetrafluorobenzonitrile
3-bromo-4-hydroxybenzonitrile
3,5-di-tert-butyl-4-hydroxybenzonitrile
3,5-di-tert-butyl-4-hydroxyphenylacetoneitrile
4-hydroxy-3-methoxyphenylacetoneitrile
4-hydroxy-3-nitrobenzonitrile
3,5-dihydroxybenzonitrile
3-(4-hydroxyphenyl)propionitrile
3-ethoxy-4-hydroxyphenylacetoneitrile
2-chloro-4-hydroxybenzonitrile
4-cyano-2-fluorophenol
3,5-dimethyl-4-hydroxybenzonitrile
2,6-dimethyl-4-hydroxybenzonitrile
2,6-dichloro-4-hydroxybenzonitrile
2-hydroxy-3-methoxyphenylacetoneitrile
8-hydroxyquinoline-2-carbonitrile
3-hydroxy-naphthalene-2-carboxylic acid (3-cyano-phenyl)-amide

5

10 Methyl-2-hydroxy-5-cyano-benzoate
3-bromo-4-hydroxy-5-methoxy-phenylacetonitrile
3,5-dimethoxy-4-hydroxyphenyl-acetonitrile
4-cyano-2-iodo-6-nitrophenol

EXAMPLE 10

25

15 Coupling of Cyanophenols to Alkyl halides on resin

30

35

The chloroacetyl piperazine carbamate resin
from Example 7 (330 g, 360 mmol) was swollen in DMA. To
a solution of 4-cyanophenol (128.6 g, 1.08 mol) in 2 l
DMA was added potassium t-butoxide (121.2 g, 1.08 mol) in
20 portions. The solution was added to the resin bound
alkyl halide, and the solution shaken at RT overnight.
The resin was washed 3 times each with DMF, 5% H₂O/DMF,
10% H₂O/DMF, 20% H₂O/DMF, IPA, and MeOH. The resin was
then vacuum dried overnight to yield 4-
25 cyanophenoxyacetyl piperazine carbamate resin.

40

The cyanophenols of Example 9 are also used in
this step by substituting for 4-cyanophenol in the above
procedure.

45

50

55

5

96

EXAMPLE 11

Coupling of BOC-cyanoethylglycine to MBHA

10

MBHA-HCl resin (5.0g, 4.05 mmol) was neutralized with 10% DIEA in DMF, then washed with DCM. N-BOC-N-cyanoethylglycine (2.05g, 9 mmol) and DIEA (1.56ml) were dissolved in 35 ml DCM, to which was added DIC (4.5 mmol, 0.71 ml). After 10 minutes HOBT (2.0 mmol, 0.3g) was added and the solution added to the resin. The solution was shaken overnight and then the resin was washed with DCM, DMF, MeOH, and dried in vacuo to give N-Boc cyanoethyl glycinamide linked to resin.

15

10

20

EXAMPLE 12

Synthesis of Amidoximes from Nitriles

25

General procedure:

15

30

35

Resin bound nitrile compounds prepared in examples 6,7,8,9,10, and 11 above were placed in teabags. Hydroxylamine-HCl (4-10 eq. based on loading of resin) and DIEA (4-10 eq) were placed in sufficient 2-methoxyethanol to give a 0.2 M solution. The resin was added and the solution heated to 80-85-C overnight. The solution was cooled to RT and the resin washed 4X with MeOH and dried to yield in each case the desired amidoxime bound to resin.

40

EXAMPLE 13

25

Synthesis of Library TRG 3600

45

50

Each of the nitrile resins from Example 3 was distributed to 36 bags with 400 mg of resin each according to Table 1: Distribution of Nitrile Resins and a number of control bags were made. To each of 36 tubes was added 55 ml of anhydrous 2-methoxyethanol, 0.83 g (12mmol) of Hydroxylamine Hydrochloride and 2.08 ml (12

55

mmol) DIEA. Once all the solids were dissolved the bags containing nitrile resins A-E were added (see table below) and the reaction tubes were heated to 85°C overnight. The tubes were cooled and the bags washed with MeOH (4X) and dried to yield the corresponding amidoxime.

List of Cyano Carboxylic Acids.

Resin A Cyanoacetic acid: 13.8 g, 162.5 mmol

Resin B 1-Cyano-1-cyclopropane carboxylic acid: 18.1 g, 162.5 mmol

Resin C 3-Cyanobenzoic acid: 23.9 g, 162.5 mmol

Resin D 4-Cyanobenzoic acid: 23.9 g, 162.5 mmol

Resin E 2-(4-Cyanophenoxy)-2-methyl propionic acid: 33.3 g, 162.5 mmol

Table 1: Distribution of Nitrile Resins

Tube #	Bag #	Resin (g)	Excess NH ₂ OH
1	A1, B1, C1, D1, E1	1.75	6.1

EXAMPLE 14

Synthesis of Oxadiazoles from Amidoximes

General Procedure

A resin bound amidoxime of Example 12 was swollen in 2-methoxyethyl ether. A solution of the appropriate carboxylic acid anhydride (7 eq) in 2-methoxyethyl ether (0.2M) was added to the amidoxime. When the anhydride was not commercially available it was prepared from a solution of carboxylic acid (14 eq, 0.4M) in 2-methoxyethyl ether to which was added DIC (7 eq, 0.2M) and shaken for 30 minutes before addition of the resin bags. The solution of anhydride and the resin bound amidoxime were heated to 60-C for 16 hours. The solution was cooled and the resin washed twice with fresh 2-methoxyethyl ether. Sufficient 2-methoxyethyl ether was added to cover the resin and the solution heated to 85-C for 6 hours. The solvent was removed and the resin washed with DMF, DCM, MeOH and dried to give the anticipated oxadiazole bound resin.

EXAMPLE 15

Oxadiazoles from Amidoximes and BOC-Amino
Acid Anhydrides TRG3600

To each of 36 tubes was added Boc-protected amino acid derivatives according to Table 2: Distribution of Amino Acids. Each amino acid (28 mmol) was dissolved in 55 ml of 2-methoxyethyl ether. To each tube was then added DIC (14 mmol) and the solution stirred at RT for 1 hr at which time a white precipitate had formed. The appropriate bags containing amidoxime from the previous step were then added and the reaction tubes were placed in a heating block at 60-C for 16 hr. The supernatant was removed and the resins washed twice with fresh 2-methoxyethyl ether. The bags were placed in 50 ml 2-

100

methoxyethyl ether and heated to 85-C for 6 hr. The tubes were cooled, and the bags washed 3X DMF, 3X DCM, 3X MeOH and dried to give 5-(N-Boc-amino)substituted oxadiazoles bound to resin.

EXAMPLE 16

Oxadiazoles from Amidoximes and
Fmoc-Amino Acid Anhydrides

The resin bound amidoximes from Example 12 were swollen in 2-methoxyethyl ether (0.1 mmol). The appropriate Fmoc amino acids, Table 3: Fmoc-amino acids, (3 mmol) were dissolved in 8 ml of 2-methoxyethyl ether. To each tube was then added DIC (1.5 mmol) and the solution stirred at RT for 1 hr at which time a white precipitate had formed. The appropriate bags containing amidoxime were then added and the reaction tubes were placed in a heating block at 60-C for 16 hr. The supernatant was removed and the resins washed twice with fresh 2-methoxyethyl ether. The bags were placed in 10 ml 2-methoxyethyl ether and heated to 85-C for 6 hr. The tubes were cooled, and the bags washed 3X DMF, 3X DCM, 3X MeOH and dried to give 5-((N-Fmoc-amino)substituted oxadiazoles bound to resin.

EXAMPLE 17

5-Chloromethyl Oxadiazoles from Amidoximes

To a solution of chloroacetic anhydride (0.2M) in 2-Methoxyethyl ether (8 eq.) was added teabags containing Amidoximes from Example 12. The reaction tubes were placed in a heating block at 60-C for 16 hrs, the supernatant removed and the resins washed twice with fresh 2-methoxyethyl ether. The bags were covered in 2-methoxyethyl ether and heated to 85-C for 6 hr. The tubes were cooled, and the bags washed 3X times each with DMF, DCM, MeOH and dried to give 5-chloromethyl oxadiazoles bound to resin.

EXAMPLE 18

5-Aminomethyl oxadiazoles from 5-Chloromethyl Oxadiazoles

The resins from Example 17 were placed in a solution of amine according to Table 3: Primary and secondary amines (0.2 M, 10 eq) in anhydrous DMF and shaken at RT for 2 hrs. The bags were then washed with DMF 4X, DCM 2X and MeOH to give 5-substituted aminomethyl oxadiazoles bound to resin.

EXAMPLE 19

Acylation of Oxadiazole Amines - General procedure

10

15

20

25

30

35

The Boc-protected Oxadiazole resins of Example 15 were treated with two portions of 50% TFA/DCM (5 min. then 30 min.), washed 3 times each with DCM, MeOH, MTBE and dried. The FMOC-protected Oxadiazole resins of Example 16 were treated with two portions of 20% piperidine in DMF, then washed with DMF, MeOH, MTBE and dried. The aminomethyl oxadiazoles of Example 18 were used without further precautions. The resins were suspended in DMF and distributed into a 96 well microtiter plate. The supernatant solvent was removed and the following solutions were added: a carboxylic acid solution, a solution of DMAP, HOBT and DIEA, a solution of DIC in DMF or DCM. Other coupling agents such as BOP, PyBOP, HATU, HBTU and others known in the art were also used in separate experiments. The quantities of each solution were adjusted according to the amount of resin per well in the plate, in order to have a five to tenfold excess of reagents. The 96 well plates were capped and shaken overnight at RT. The resins were then washed with DMF (8X), MeOH (4X) and the resin allowed to dry resulting in the N-acylated-5-(substituted aminomethyl)oxadiazoles bound to resin.

25 List of Carboxylic acids

40

45

50

55

No.	Carboxylic Acid	Group
1	(3,4-Dimethoxyphenyl)Acetic acid	1
2	(a,a,a-Trifluoro-m-Tolyl)acetic acid	1
3	(Methylthio)acetic acid	1
30 4	1-(4-Chlorophenyl)-1-Cyclopentanecarboxylic acid	1
5	1-Adamantaneacetic acid	1
6	1-cyano-1-cyclopropane carboxylic acid	1
7	1-Naphthylacetic acid	1

EXAMPLE 20

35

Sulfonylation of Oxadiazole Amines

The Boc-protected oxadiazole resins of Example 25 15 were treated with two portions of 50% TFA/DCM (5 min. then 30 min.), washed 3 times each with DCM, MeOH, MTBE and dried. The Fmoc-protected oxadiazole resins of Example 16 were treated with two portions of 20% piperidine in DMF, then washed with DMF, MeOH, MTBE and dried. The aminomethyl oxadiazoles of Example 18 were used without further precautions. The resins were suspended in DMF and distributed into a 96 well microtiter plate. The supernatant solvent was removed, and the resin washed with acetonitrile. A solution of N-methylimidazole (5.5 to 11 eq/mmol resin) in acetonitrile

55

5 was added followed by a solution of sulfonyl chloride in
ACN (5 to 10 eq/mmol resin). The plates were capped and
10 vortexed and shaken overnight. The plates were then
washed with ACN (8X) and MeOH (8X), and dried to give
5 substituted 5-(N-sulfonyl)-oxadiazoles bound to resin.

List of Sulfonyl chlorides.

15 were treated with two portions of 50% TFA/DCM (5 min.
15 then 30 min.), washed 3 times each with DCM, MeOH, MTBE
and dried. The FMOC-protected oxadiazole resins of
Example 16 were treated with two portions of 20%
30 piperidine in DMF, then washed with DMF, MeOH, MTBE and
dried. The aminomethyl oxadiazoles of Example 18 were
20 used without further precautions. The resins were
suspended in DMF and distributed into a 96 well
microtiter plate. The resin was then washed and
35 neutralized with 5% DIEA in 1,2-dichloroethane(DCE) /THF
(2:1) and washed with DCE/THF (2:1) to remove excess
25 base. The following Isocyanates were dissolved to a
concentration of 0.2 M in DCE/THF (2:1) and added to the
40 plates. The solutions were shaken at RT overnight and
then the plates were washed with DCE/THF (2:1), DMF, MeOH
and dried to give N-substituted ureido oxadiazole resins.

Synthesis of Oxadiazole Thioureas

15

20

25

30

35

5 The Boc-protected Oxadiazole resins of Example
15 15 were treated with two portions of 50% TFA/DCM (5 min.
 then 30 min.), washed 3 times each with DCM, MeOH, MTBE
 and dried. The FMOC-protected Oxadiazole resins of
 Example 16 were treated with two portions of 20%
20 10 piperidine in DMF, then washed with DMF, MeOH, MTBE and
 dried. The aminomethyl oxadiazoles of Example 18 were
 used without further precautions. The resins were
 suspended in DMF and distributed into a 96 well
 microtiter plate. The resin was then washed and
25 15 neutralized with 5% DIEA in 1,2-dichloroethane(DCE) /THF
 (2:1) and washed with DCE/THF (2:1) to remove excess
 base. The following Isothiocyanates were dissolved to a
 concentration of 0.2 M in DCE/THF (2:1) and added to the
30 plates. The solutions were shaken at RT overnight and
20 then the plates were washed with DCE/THF (2:1), DMF, MeOH
 and dried to give N-substituted thioureido oxadiazole
 resins.

EXAMPLE 23

10

Oxadiazoles derived from 2-Cyanoethylglycine
(Part 1)

15

20

25

30

5 Boc 2-cyanoethyl glycine was loaded onto MBHA
resin and converted to the Amidoxime as described in the
general procedures of Example 13. This amidoxime resin
was treated with a BOC amino acid anhydride as described
in Example 15. The bis BOC protected oxadiazole
10 derivative was then treated with 50 % TFA in DCM (2 X 15
min) and washed with DCM and MeOH. The diamines were
then treated with 0.2 M benzoic acid, DIC, HOBT and DIEA
in DCM or with acetic anhydride in DCM at RT overnight.
The resin was washed with DMF 4X, DCM 2X and MeOH and
15 dried to give the di-acylated oxadiazole resins.
Alternatively, the amidoxime is treated with an Fmoc
amino acid anhydride as in the procedure of Example 16 to
give mono-acylated-(Fmoc amino)oxadiazole resins.

EXAMPLE 24

35

20 Aminomethyl Oxadiazoles derived from 2-Cyanoethylglycine
(Part 2)

40

45

50

Boc 2-cyanoethyl glycine is loaded onto MBHA
resin and converted to the oxadiazole as described in
Example 17. Individual tea bags containing portions of
25 the resulting 5-chloromethyl oxadiazole derivative are
then treated with diverse amines in DMF as in Example 18.
The 5-aminomethyl oxadiazole derivatives are then
acylated to give the N-acylated-5-(substituted
aminomethyl)oxadiazole resins, sulfonylated to give N-
30 sulfonyl-5-(substituted aminomethyl)oxadiazole resins,
alkylated to give N- alkylated-5-(substituted
aminomethyl)oxadiazole resins, treated with isocyanates
to give N-substituted ureidooxadiazole resins or

55

138

isothiocyanates to give N- substituted
thioureidooxadiazole resins as described in Example 19,
Example 20, Example 21, and Example 22. The products are
then treated with 50% TFA in DCM to remove the remaining
BOC group. The amino group from the groups defined above
are further converted to either an amide, sulfonamide,
urea or thiourea derivative following the general
procedures of Example 19, Example 20, Example 21, and
Example 22 to give a diverse library of oxadiazole
resins.

EXAMPLE 25

Cleavage and Extraction of Products Synthesized on
MBHA resin

To the dry microtiter plates containing the
oxadiazole resin products was added 25 ul anisole in each
well. The plates were then exposed to HF gas in an HF
apparatus at RT for 1 hr. Some HF condensed in each well
thus nitrogen was blown through the apparatus to remove
the excess HF. The plates were then transferred to a
polypropylene vacuum dessicator and evacuated overnight.
The plates were then extracted into tared plates with
either 1:1 Acetonitrile/water, Acetic acid or DMF. The
plates containing product were lyophilized and the
average yield measured. The products were analyzed by
mass spectrometry and HPLC/MS.

139

EXAMPLE 26

Cleavage and Extraction of Products Synthesized on Wang
or DAB resin

To the dry microtiter plates containing the
oxadiazole resin products was added 1 ml of a solution of
TFA/DCM (25 TO 50% TFA) in each well. The plates were
then transferred to a vacuum centrifuge and evacuated
overnight. The plates were then extracted into tared
plates with either 1:1 Acetonitrile/water, Acetic acid or
DMF. The plates containing product were lyophilized and
the yield measured. The products were analyzed by mass
spectrometry and HPLC/MS.

EXAMPLE 27

Analysis of the products

The products were analyzed by HPLC-MS using a
Hewlett-Packard HPLC system hooked up to Finnigan-Mat
LCQ spectrometer. FIA-MS was performed on a Sciex
instrument, and HPLC was performed on a Waters HPLC
system equipped with a UV detector and an evaporative
light scattering detector (ELSD).

EXAMPLE 28

Preparation of carboxylic acids on solid support.
(Part 1)

A resin bound amine of Example 4 and Example 5
(1.0g, 1 mmol) was treated with succinic anhydride (5
mmol) in 10 ml DCM at RT overnight. The resin teabag was
washed with DCM and MTBE and dried to give the resin
bound succinylated amine.

5

140

EXAMPLE 29

Preparation of carboxylic acids on solid support.

(Part 2)

10

Wang resin (10 g, 12 mmol) was swollen in DCM
5 for 15 min and the excess solvent poured off. A solution
of carbonyl diimidazole (10 g, 50 mmol) in DCM was added
15 and shaken for 3 hours. The solvent was poured off and
the resin washed with DCM (2X) then a solution of an
amino acid ester (50 mmol) and DIEA (50 mmol) in DCM was
20 added, and the solution shaken overnight. The
supernatant was removed, and the resin washed with DCM,
IPA, DMF, IPA and MeOH. The resulting amino acid ester,
linked to the resin through a carbamate linkage, was then
25 treated with a solution of tetramethylammonium hydroxide
15 (50 mmol) in DCM at RT overnight. The supernatant was
removed, and the resin washed with DCM, IPA, DMF, IPA and
MeOH to give the resin-bound carboxylic acid.

30

EXAMPLE 30

Synthesis of Amidoximes from nitriles in solution

20 To a solution of benzonitrile (10 mmol) in 100
ml absolute ethanol was added hydroxylamine hydrochloride
35 (12 mmol) and K₂CO₃ (12 mmol). The solution was heated
to reflux and monitored by thin layer chromatography for
the disappearance of nitrile. The solution was then
40 cooled and filtered and the solvent evaporated to give
25 the crude benzamidoxime which was used in the next step
directly. Other aliphatic, benzylic and aromatic
nitriles were treated similarly to give the corresponding
amidoximes.

45

50

55

141

EXAMPLE 31

Preparation of oxadiazoles from resin bound
carboxylic acids

The resin bound carboxylic acids of Example 28 and Example 29, (1 g, 10 mmol) were placed in DCM and treated with 10 equivalents each of pentafluorophenol, DIEA and diisopropyl carbodiimide. After shaking for 3 hours, the solvent was poured off and the pentafluorophenyl esters were washed with 2-methoxyethyl ether and treated with a solution of 10 equivalents amidoxime from Example 30 in 2-methoxyethyl ether. The solution was heated to 60° C overnight. The solvent was then removed and the resin washed twice with 2-methoxyethyl ether and then heated to 85 °C in fresh with 2-methoxyethyl ether. The solvent was removed and the resin washed with MeOH and dried to give oxadiazole resins.

EXAMPLE 32

Preparation of Oxadiazole combinatorial libraries:
Synthesis of TRG 3600

Five carboxylic acid nitriles were coupled to 15 g of MBHA resin each as described in Example 3. Each nitrile resin was then distributed to 36 teabags and sets of 5 teabags were converted to oxadiazole derivatives by conversion to the amidoxime as in Example 13, and each amidoxime was reacted with 36 different Boc amino acids to give 180 different oxadiazole intermediates as described in Example 15. Each of the 180 intermediates was deprotected by treatment with 50% TFA/DCM, and each resin was transferred to a 96 well reaction block. Each intermediate in the reaction block was then treated with 96 carboxylic acids from Example 19. The final products were then cleaved from the resin with HF, extracted from the resin using acetic acid and lyophilized as described

5

10

in Example 25. An aliquot of each product was taken and analyzed by mass spectrometry and HPLC with UV and ELSD detection. This created 17280 oxadiazole amide products which correspond to all permutations of the reagents listed below.

EXAMPLE 35

Preparation of Oxadiazole combinatorial libraries:
Synthesis of TRG 5500

The cyanophenols listed below were coupled to
300 g each of Wang bromide resin to give the
corresponding cyanophenyl ethers, following the procedure
of Example 9. 600g of resin bound piperazine prepared in
Example 5 was converted to 300 g of resin bound 4-
cyanobenzyl piperazine following Example 8, and 300 g of
resin bound 4-cyanophenoxyacetyl piperazine according to
the procedures of Example 7 and Example 10. The seven
resulting resin bound nitriles were converted to the
amidoxime as described in the general procedure of
Example 12. The amidoximes were converted to the 5-
chloromethyl oxadiazoles as described in Example 17.
Each chloromethyl oxadiazole resin was reacted with the
60 primary amines listed below following the procedure of
Example 18 to give 420 aminomethyl oxadiazole
intermediates. Each of the 420 intermediates was reacted
with 80 carboxylic acids to give the amide derivatives
and 48 sulfonyl chlorides to give sulfonamides according
to the procedures of Example 19 and Example 20
respectively. The final products were cleaved from the
resin with 50% TFA/DCM, and evaporated. The products
were extracted from the resin using acetic acid and
lyophilized as described in Example 25. An aliquot of
each product was taken and analyzed by mass spectrometry
and HPLC with UV and ELSD detection.

EXAMPLE 36

Anti-microbial Screen

Streptococcus pyogenes (ATCC# 97-03 14289) were grown in Todd Hewitt Broth (THB) (Difco Laboratories #0492-17-6) overnight until they reached an optical density of (OD = 0.636@ 570 nm) by reading 0.1 ml in a 96 well microtiter plate in a Molecular Devices Thermomax. This preparation was kept frozen as stocks in 30% v/v glycerol in 1.5 ml aliquots at -70 C° until use.

5

158

10

15

Prior to screening, 1.5 ml aliquots were thawed and diluted into 50 ml THB. 200 ul of this dilution was added to 92 wells of microtiter plate. To three wells THB (200 ul) was added to serve as a blank and a sterility control. Test compounds in DMSO and appropriate concentrations of DMSO were added to Growth/Solvent Controls at 0 time. Plates were read at 0 time at 570 nm in the Molecular Devices plate reader to obtain compounds correction factors for insoluble or colored compounds. Plates were read again at 4 hrs.

20

25

30

Compounds listed in the table below are described in reference to Formula (I), wherein the ring structure is a 1, 2, 4 oxadiazole (where U is an oxygen), R_1 corresponds to the starting material of X_1 and X_2 , R_2 corresponds to the starting material of X_3 and R_3 corresponds to the starting material of X_4 . The compounds were assayed at a concentration of 170 $\mu\text{g/ml}$. Percent inhibition for each compound was calculated using the following formulae:

35

20 Color correct =
(O.D. 0 hr - Blank 0 hr) - (Solvent Control 0 hr - Blank 0 hr)

40

% Inhibition =
25 100 - (O.D. test compound 4 hr - Blank 4 hr - color correct) divided by (O.D. growth/solvent control 4 hr - Blank 4 hr)

EXAMPLE 37

Preparation of 1,3,4-Oxadiazoles

10

15

20

25

30

The resin bound carboxylic acids of examples 28 and 29 are placed in a solution of 4-nitrophenyl trifluoroacetate (10 equivalents) in DCM and shaken at RT for 6 hours to give the corresponding 4-nitrophenyl esters. The resins are washed 5 times with DCM and a solution of an acyl hydrazide in DMF is added to the 4-nitrophenyl esters. After shaking overnight, the resulting resin bound diacyl hydrazides are washed with DMF, DCM and Methanol (4 times each) and dried. The resin bound diacyl hydrazides are then suspended in a solution of triethylamine (10 eq) and triphenylphosphine (10 eq) in DCM. To the solutions is added carbon tetrachloride (9 eq) dropwise over 15 minutes. The cyclization reaction is allowed to proceed overnight at 45°C. The resins are then washed with DCM and Methanol and dried to provide the resin bound 1,3,4-oxadiazole compounds.

20

EXAMPLE 38

Preparation of 1,3,4-Thiadiazoles

35

40

45

50

The resin bound carboxylic acids of examples 28 and 29 are placed in a solution of 4-nitrophenyl trifluoroacetate (10 equivalents) in DCM and shaken at RT for 6 hours to give the corresponding 4-nitrophenyl esters. The resins are washed 5 times with DCM and a solution of an acyl hydrazide in DMF is added to the 4-nitrophenyl esters. After shaking overnight, the resulting resin bound diacyl hydrazides are washed with DMF, DCM and Methanol (4 times each) and dried. The diacylhydrazides are suspended in a solution of Lawesson's reagent (10 eq) in toluene, and the solutions heated to 110°C overnight. The resins are then washed

55

170

with DCM, DMF, DCM and Methanol (4X each) and dried to provide the resin bound 1,3,4-thiadiazole compounds.

EXAMPLE 39

Preparation of 1,2,4-Triazoles

The resin bound carboxylic acids of examples 28 and 29 are placed in a solution of 4-nitrophenyl trifluoroacetate (10 equivalents) in DCM and shaken at RT for 6 hours to give the corresponding 4-nitrophenyl esters. The resins are washed 5 times with DCM and a solution of hydrazide in DMF is added to the 4-nitrophenyl esters. After shaking overnight, the resulting resin bound acyl hydrazides are washed with DMF, DCM and Methanol (4 times each) and dried. The resins are treated with a solution of an amidine (5 eq) and potassium carbonate (10 eq) in 2-methoxyethanol. The mixtures are heated at 100°C for 3 days, then the resins are washed with DMF and Methanol and dried to provide the corresponding resin bound 1,2,4-triazole compounds.

Although the invention has been described with reference to the examples provided above, it should be understood that various modifications can be made by those skilled in the art without departing from the invention. Accordingly, the invention is set out in the following claims.

55

WE CLAIM:

1. A single compound of the structure:

Formula (I)

wherein:

- 5 T, U and V are independently selected from an oxygen, sulfur or nitrogen atom, provided that at least two of T, U and V are a nitrogen atom;

- 10 X₁ is selected from the group consisting of H, -NHC(O)NR₁R₂, -CO₂R₁, -OR₁, -NR₁R₂, -C(O)NR₁R₂, and -CH₂NR₁R₂, wherein R₁ is a hydrogen atom or a functionalized resin, and R₂ is a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₂ to C₇ alkenyl, C₂ to C₇ substituted alkenyl, phenyl, substituted phenyl, naphthyl, substituted naphthyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, heteroaryl, substituted heteroaryl, heterocycle, substituted heterocycle, the formulae:

172

and

wh

erein Q is a hydrogen atom or functionalized resin;

X₂ is selected from the group consisting of C₁ to C₁₂ alkylene, C₁ to C₁₂ substituted alkylene, C₂ to C₇ alkenylene, C₂ to C₇ substituted alkenylene, C₂ to C₇ alkynylene, C₃ to C₇ cycloalkylene, C₃ to C₇ substituted cycloalkylene, C₃ to C₇ cycloalkenylene, C₅ to C₇ substituted cycloalkenylene, phenylene, substituted phenylene, naphthylene, substituted naphthylene, C₇ to C₁₂ phenylalkylene, C₇ to C₁₂ substituted phenylalkylene, C₇ to C₁₂ phenylalkoxy, C₇ to C₁₂ substituted phenylalkoxy,

173

the formula:

wherein m and n are integers independently selected from 0 to 6, provided that m and n are not together 0; and G is selected from phenylene and substituted phenylene,

the formula:

wherein m and n are integers independently selected from 0 to 6, provided that m and n are not together 0; and R₃ is selected from the group consisting of a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₁ to C₄ alkyl sulfonyl, C₁ to C₄ substituted alkyl sulfonyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl, substituted phenylaminothiocarbonyl, C₁ to C₇ alkoxy carbonyl, C₁ to C₇ substituted alkoxy carbonyl, phenoxy carbonyl and substituted phenoxy carbonyl,

the formula:

wherein n is an integer selected from 0 to 6;
R₄ and R₅ are together or independently a
hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆
substituted alkyl, C₂ to C₇ alkenyl, C₂ to C₇
alkynyl, C₂ to C₇ substituted alkenyl, C₂ to
C₇ substituted alkynyl, C₁ to C₇ acyl, C₁ to C₇
substituted acyl, C₃ to C₇ cycloalkyl, C₃ to
C₇ substituted cycloalkyl, C₃ to C₇
cycloalkenyl, C₃ to C₇ substituted
cycloalkenyl, a heterocyclic ring,
substituted heterocyclic ring, heteroaryl,
substituted heteroaryl, C₇ to C₁₂ phenylalkyl,
C₇ to C₁₂ substituted phenylalkyl, C₇ to C₁₂
phenylalkoxy, C₇ to C₁₂ substituted
phenylalkoxy, phenyl, substituted phenyl,
naphthyl, substituted naphthyl, cyclic C₂ to
C₇ alkylene, substituted cyclic C₂ to C₇
alkylene, cyclic C₂ to C₇ heteroalkylene,
substituted cyclic C₂ to C₇ heteroalkylene,
carboxy, protected carboxy, hydroxymethyl and
protected hydroxymethyl; and G is selected
from phenylene and substituted phenylene, and

175

the formula:

wherein J and K are each selected from the group consisting of phenylene and substituted phenylene, and m and n are independently selected from 0 and 1, and

the formulae (IV) and (V):

X_3 is absent or is selected from the group consisting of the formula:

wherein:

R_4 and R_5 are together or independently selected from the group consisting of a hydrogen atom, C_1 to C_6 alkyl, C_2 to C_7 alkenyl, C_2 to C_7 alkynyl, C_1 to C_6 substituted

176

alkyl, C₂ to C₇ substituted alkenyl, C₂ to C₇ substituted alkynyl, C₁ to C₇ acyl, C₁ C₇ substituted acyl, C₃ to C₇ cycloalkyl, C₃ to C₇ substituted cycloalkyl, C₅ to C₇ cycloalkenyl, C₅ to C₇ substituted cycloalkenyl, a heterocyclic ring, substituted heterocyclic ring, heteroaryl, substituted heteroaryl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₇ to C₁₂ phenylalkoxy, C₇ to C₁₂ substituted phenylalkoxy, phenyl, substituted phenyl, naphthyl, substituted naphthyl, cyclic C₂ to C₇ alkylene, substituted cyclic C₂ to C₇ alkylene, cyclic C₂ to C₇ heteroalkylene, substituted cyclic C₂ to C₇ heteroalkylene, carboxy, protected carboxy, hydroxymethyl and protected hydroxymethyl,

the formulae (VIa) and (VIb):

wherein in formula (VIa) m and n are independently selected from 0, 1, 2, 3 and 4; and wherein in formula (VIb) m is selected from 0, 1, 2, 3 and 4;

the formula:

wherein R_6 is selected from the group consisting of a hydrogen atom, amino, amino-protecting group, $-NR_8R_9$, carboxy, carboxy-protecting group, $-C(O)NR_8R_9$, wherein R_7 and R_8 are independently selected from a hydrogen atom, C_1 to C_6 alkyl, C_1 to C_6 substituted alkyl, C_7 to C_{12} phenylalkyl, C_7 to C_{12} substituted phenylalkyl, C_1 to C_7 acyl, C_1 to C_7 substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C_1 to C_4 alkylsulfonyl, C_1 to C_4 substituted alkylsulfonyl, C_1 to C_6 alkylaminocarbonyl, C_1 to C_6 substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C_1 to C_6 alkylaminothiocarbonyl, C_1 to C_6 substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl; and m and n are independently selected from 0, 1, 2, 3 and 4; and

the formulae (VII) to (XIII):

(VII)

(VIII)

(IX)

(X)

(XI)

(XII)

(XIII)

wherein q is 1 or 2; r is 0 or 1; s and t are independently selected from 0, 1 or 2; and R₇ and R₈ are independently selected from a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₁ to C₇ acyl,

C₁ to C₇ substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl; and R₉ is selected from a hydrogen atom, -OH, hydroxy-protecting group, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, C₁ to C₇ phenylalkoxy, phenyl, substituted phenyl, heteroaryl and substituted heteroaryl; and

X₄ is absent or is selected from the group consisting of a hydrogen atom, -OH, -CO₂H, -C(O)NR₇R₈ and -NR₇R₈, wherein R₇ and R₈ are independently selected from a functionalized resin, a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl,

and the formulae:

wherein R₉ and R₁₀ are independently selected from a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₇ to C₁₂ phenylalkoxy, C₇ to C₁₂ substituted phenylalkoxy, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₆ alkylsulfonyl, C₁ to C₆ substituted alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl; and s is an integer selected from 1 to 5;

a pharmaceutically acceptable salt of a compound thereof;
or

a biologically active ester form of a compound thereof.

2. The single compound of claim 1, wherein one of T, U and V is oxygen and the other two positions are each nitrogen.

181

3. The single compound of claim 2, wherein U is oxygen, T is nitrogen and V is nitrogen.

4. The single compound of claim 1, wherein

X_1 is selected from the group consisting of $-\text{CO}_2\text{R}_1$, $-\text{OR}_1$, NR_1R_2 , $-\text{C}(\text{O})\text{NR}_1\text{R}_2$,

and the formulae:

X_2 is selected from the group consisting of C_1 to C_{12} alkylene, C_1 to C_{12} substituted alkylene, C_3 to C_7 cycloalkylene, C_3 to C_7 substituted cycloalkylene, phenylene, substituted phenylene, naphthylene, substituted naphthylene, C_7 to C_{12} phenylalkylene, C_7 to C_{12} substituted phenylalkylene,

the formula:

182

5

wherein m is 1 to 3 and n is 1 to 4,

and the formula:

10

15

20

5

wherein n is 0 or 1; R₄ and R₅ are together or independently a hydrogen atom, C₁ to C₆ alkyl or C₁ to C₁₀ substituted alkyl,

and the formula:

25

30

35

10

wherein m and n are integers independently selected from 0 and 1;

X₃ is absent or the formula:

40

45

wherein:

50

15

R₄ and R₅ are together or independently selected from the group consisting of a hydrogen atom, C₁

55

183

5

10

to C₆ alkyl, C₁ to C₁₂ substituted phenylalkyl,
substituted phenyl, hydroxymethyl, protected
hydroxymethyl, C₃ to C₇ cycloalkyl, C₃ to C₇
substituted cycloalkyl,

5 the formula:

15

20

(VIb)

wherein m is 0,

25

and the formula:

30

35

10

wherein m is 0 to 2 and n is 1 to 4; and

where X_3 is absent, X_4 is selected from the group
consisting of the formulae:

40

45

50

55

184

wherein R_9 is selected from a hydrogen atom and -OH.

5. The single compound of claim 1, wherein:

5 X_1 is selected from the group consisting of $-CO_2R_1$, $-OR_1$, $-NR_1R_2$, $-C(O)NR_1R_2$,

and the formula:

6. The single compound of claim 3, wherein:

10 X_1 is selected from the group consisting of OH, $CONH_2$, 2-(1-pyrrolidino)ethylamine, 2-pyridinemethylamine, 2-(4-imidazole)ethylamine, cyclopentylamine, allylamine, 2-methoxyethylamine,

7. A combinatorial library of two or more
 compounds of the structure:

Formula (I)

wherein:

T, U and V are independently selected from an oxygen,
 sulfur or nitrogen atom, provided that at least two
 of T, U and V are a nitrogen atom;

X_1 is selected from the group consisting of H,
-NHC(O)NR₁R₂, -CO₂R₁, -OR₁, -NR₁R₂, -C(O)NR₁R₂, and
-CH₂NR₁R₂, wherein R₁ is a hydrogen atom or a
functionalized resin, and R₂ is a hydrogen atom, C₁
to C₆ alkyl, C₁ to C₆ substituted alkyl, C₂ to C₇
alkenyl, C₂ to C₇ substituted alkenyl, phenyl,
substituted phenyl, naphthyl, substituted naphthyl,
C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted
phenylalkyl, heteroaryl, substituted heteroaryl,
heterocycle, substituted heterocycle, the formulae:

wherein Q is a hydrogen atom or functionalized resin;

X₂ is selected from the group consisting of C₁ to C₁₂ alkylene, C₁ to C₁₂ substituted alkylene, C₂ to C₇ alkenylene, C₂ to C₇ substituted alkenylene, C₂ to C₇ alkynylene, C₃ to C₇ cycloalkylene, C₃ to C₇ substituted cycloalkylene, C₃ to C₇ cycloalkenylene, C₃ to C₇ substituted cycloalkenylene, phenylene, substituted phenylene, naphthylene, substituted naphthylene, C₇ to C₁₂ phenylalkylene, C₇ to C₁₂ substituted phenylalkylene, C₇ to C₁₂ phenylalkoxy, C₇ to C₁₂ substituted phenylalkoxy,

the formula:

wherein m and n are integers independently selected from 0 to 6, provided that m and n are not together 0; and G is selected from phenylene and substituted phenylene,

the formula:

wherein m and n are integers independently selected from 0 to 6, provided that m and n are not together 0; and R₃ is selected from the group consisting of a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₁ to C₄ alkyl sulfonyl, C₁ to C₄ substituted alkyl sulfonyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl,

205

substituted phenylaminocarbonyl, C₁ to C₆
 alkylaminothiocarbonyl, C₁ to C₆ substituted
 alkylaminothiocarbonyl,
 phenylaminothiocarbonyl, substituted
 phenylaminothiocarbonyl, C₁ to C₇
 alkoxycarbonyl, C₁ to C₇ substituted
 alkoxycarbonyl, phenoxycarbonyl and substituted
 phenoxycarbonyl,

the formula:

wherein n is an integer selected from 0 to 6; R₄
 and R₅ are together or independently a hydrogen
 atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl,
 C₂ to C₇ alkenyl, C₂ to C₇ alkynyl, C₂ to C₇
 substituted alkenyl, C₂ to C₇ substituted
 alkynyl, C₁ to C₇ acyl, C₁ to C₇ substituted
 acyl, C₃ to C₇ cycloalkyl, C₃ to C₇ substituted
 cycloalkyl, C₃ to C₇ cycloalkenyl, C₃ to C₇
 substituted cycloalkenyl, a heterocyclic ring,
 substituted heterocyclic ring, heteroaryl,
 substituted heteroaryl, C₁ to C₁₂ phenylalkyl, C₁
 to C₁₂ substituted phenylalkyl, C₁ to C₁₂
 phenylalkoxy, C₁ to C₁₂ substituted
 phenylalkoxy, phenyl, substituted phenyl,
 naphthyl, substituted naphthyl, cyclic C₂ to C₇
 alkylene, substituted cyclic C₂ to C₇ alkylene,
 cyclic C₂ to C₇ heteroalkylene, substituted
 cyclic C₂ to C₇ heteroalkylene, carboxy,
 protected carboxy, hydroxymethyl and protected

206

hydroxymethyl; and G is selected from phenylene and substituted phenylene, and

the formula:

(III)

wherein J and K are each selected from the group consisting of phenylene and substituted phenylene, and m and n are independently selected from 0 and 1, and

the formulae (IV) and (V):

(IV)

(V)

; and

5

207

X_3 is absent or is selected from the group consisting of the formula:

10

15

wherein:

20

25

10

30

15

35

20

40

45

50

55

R_4 and R_5 are together or independently selected from the group consisting of a hydrogen atom, C_1 to C_6 alkyl, C_2 to C_7 alkenyl, C_2 to C_7 alkynyl, C_1 to C_6 substituted alkyl, C_2 to C_7 substituted alkenyl, C_2 to C_7 substituted alkynyl, C_1 to C_7 acyl, C_1 to C_7 substituted acyl, C_3 to C_7 cycloalkyl, C_3 to C_7 substituted cycloalkyl, C_3 to C_7 cycloalkenyl, C_5 to C_7 substituted cycloalkenyl, a heterocyclic ring, substituted heterocyclic ring, heteroaryl, substituted heteroaryl, C_1 to C_{12} phenylalkyl, C_1 to C_{12} substituted phenylalkyl, C_1 to C_{12} phenylalkoxy, C_1 to C_{12} substituted phenylalkoxy, phenyl, substituted phenyl, naphthyl, substituted naphthyl, cyclic C_2 to C_7 alkylene, substituted cyclic C_2 to C_7 alkylene, cyclic C_2 to C_7 heteroalkylene, substituted cyclic C_2 to C_7 heteroalkylene, carboxy, protected carboxy, hydroxymethyl and protected hydroxymethyl,

the formulae (VIa) and (VIb):

wherein in formula (VIa) m and n are
independently selected from 0, 1, 2, 3 and 4;
and wherein in formula (VIb) m is selected from
0, 1, 2, 3 and 4;

the formula:

wherein R₆ is selected from the group consisting
of a hydrogen atom, amino, amino-protecting
group, -NR₇R₈, carboxy, carboxy-protecting
group, -C(O)NR₇R₈, wherein R₇ and R₈ are
independently selected from a hydrogen atom, C₁
to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂
phenylalkyl, C₇ to C₁₂ substituted phenylalkyl,
C₁ to C₇ acyl, C₁ to C₇ substituted acyl,
phenylsulfonyl, substituted phenylsulfonyl, C₁
to C₄ alkylsulfonyl, C₁ to C₄ substituted
alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁
to C₆ substituted alkylaminocarbonyl,
phenylaminocarbonyl, substituted

phenylaminocarbonyl, C₁ to C₆
alkylaminothiocarbonyl, C₁ to C₆ substituted
alkylaminothiocarbonyl, phenylaminothiocarbonyl
and substituted phenylaminothiocarbonyl; and m
and n are independently selected from 0, 1, 2,
3 and 4; and

the formulae (VII) to (XIII):

210

wherein q is 1 or 2; r is 0 or 1; s and t are independently selected from 0, 1 or 2; and R₇ and R₈ are independently selected from a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl; and R₉ is selected from a hydrogen atom, -OH, hydroxy-protecting group, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ alkoxy, C₁ to C₇ phenylalkoxy, phenyl, substituted phenyl, heteroaryl and substituted heteroaryl; and

X₄ is absent or is selected from the group consisting of a hydrogen atom, -OH, -CO₂H, -C(O)NR₇R₈ and -NR₇R₈, wherein R₇ and R₈ are independently selected from a functionalized resin, a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₄ alkylsulfonyl, C₁ to C₄ substituted alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl,

and the formulae:

wherein R_9 and R_{10} are independently selected from a hydrogen atom, C_1 to C_6 alkyl, C_1 to C_6 substituted alkyl, C_7 to C_{12} phenylalkyl, C_7 to C_{12} substituted phenylalkyl, C_7 to C_{12} phenylalkoxy, C_7 to C_{12} substituted phenylalkoxy, C_1 to C_7 acyl, C_1 to C_7 substituted acyl, phenylsulfonyl, substituted phenylsulfonyl, C_1 to C_4 alkylsulfonyl, C_1 to C_4 substituted alkylsulfonyl, C_1 to C_6 alkylaminocarbonyl, C_1 to C_6 substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C_1 to C_6 alkylaminothiocarbonyl, C_1 to C_6 substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl and substituted phenylaminothiocarbonyl; and s is an integer selected from 1 to 5;

a pharmaceutically acceptable salt of a compound thereof;

or

a biologically active ester form of a compound thereof.

8. The combinatorial library of claim 7, wherein one of T, U and V is oxygen and the other two positions are each nitrogen.

9. The combinatorial library of claim 8, wherein U is oxygen, T is nitrogen and V is nitrogen.

212

10. The combinatorial library of claim 7,
wherein

X_1 is selected from the group consisting of $-\text{CO}_2\text{R}_1$, $-\text{OR}_1$,
 NR_1R_2 , $-\text{C}(\text{O})\text{NR}_1\text{R}_2$,

and the formulae:

and

X_2 is selected from the group consisting of C_1 to C_{12}
alkylene, C_1 to C_{12} substituted alkylene, C_3 to C_7
cycloalkylene, C_3 to C_7 substituted cycloalkylene,
phenylene, substituted phenylene, naphthylene,
substituted naphthylene, C_7 to C_{12} phenylalkylene, C_7
to C_{12} substituted phenylalkylene,

the formula:

wherein m is 1 to 3 and n is 1 to 4,

213

and the formula:

wherein n is 0 or 1; R₄ and R₅ are together or independently a hydrogen atom, C₁ to C₆ alkyl or C₁ to C₁₀ substituted alkyl,

and the formula:

wherein m and n are integers independently selected from 0 and 1;

5

214

X_3 is absent or the formula:

10

15

wherein:

20

5

R_4 and R_5 are together or independently selected from the group consisting of a hydrogen atom, C_1 to C_6 alkyl, C_1 to C_{12} substituted phenylalkyl, substituted phenyl, hydroxymethyl, protected hydroxymethyl, C_3 to C_7 cycloalkyl, C_3 to C_7 substituted cycloalkyl,

25

10

the formula:

30

35

wherein m is 0,

40

and the formula:

45

50

15

wherein m is 0 to 2 and n is 1 to 4; and

55

215

where X_1 is absent, X_1 is selected from the group consisting of the formulae:

wherein R_9 is selected from a hydrogen atom and -OH.

11. The combinatorial library of claim 7, wherein:

X_1 is selected from the group consisting of $-\text{CO}_2\text{R}_1$, $-\text{OR}_1$, $-\text{NR}_1\text{R}_2$, $-\text{C}(\text{O})\text{NR}_1\text{R}_2$,

5

216

and the formula:

10

15

12. The combinatorial library of claim 9,
wherein:

20

25

30

35

40

45

50

55

5 X_1 is selected from the group consisting of OH, CONH_2 ,
2-(1-pyrrolidino)ethylamine, 2-pyridinemethylamine,
2-(4-imidazole)ethylamine, cyclopentylamine,
allylamine, 2-methoxyethylamine,
(+/-)-tetrahydrofurylamine, benzylamine,
2-methylbenzylamine, 3-methylbenzylamine,
4-methylbenzylamine, 2-fluorobenzylamine,
3-fluorobenzylamine, 4-fluorobenzylamine,
3-(1-imidazole)propylamine,
4-aminomethylbenzylamine, 4-methoxybenzylamine,
3-chlorobenzylamine, 3-bromobenzylamine,
4-bromobenzylamine, cyclopropylamine,
cyclopropanemethylamine, 4-pyridinemethylamine,
3-pyridinemethylamine, 2-thiophenemethylamine,
phenethylamine, 2-(morpholine)ethylamine, 3-
methoxybenzylamine, piperonylamine,
4-methoxyphenethylamine, 2-fluorophenethylamine,
2-(4-chlorophenyl)ethylamine,
2-(3-chlorophenyl)ethylamine,
2-(2-chlorophenyl)ethylamine, 2,3-dimethoxy-
benzylamine, 3,4-dimethoxyphenethylamine, 2,4-
dichlorophenethylamine, 2-(diethylamino)ethylamine,
2-(1-methylpyrrolidin-2-yl)ethylamine,
3-(diethylamino)propylamine,
2-(5-nitro-2-pyridyl)ethylamine,
3-(dimethylamino)-2,2-dimethylpropylamine,
3-(dimethylamino)propylamine, 2-aminoethylamine,
2-(piperidino)ethylamine, isoamylamine,

13. A method for preparing the combinatorial
library of claim 9, comprising:

5

234

10

5

(a) reacting one or more resin-bound amines with one or more nitrile-containing carboxylic acids, nitrile-containing isocyanates or nitrile-containing radicals with a leaving group to obtain two or more resin-bound nitriles;

15

(b) cyclizing the resin-bound nitriles to obtain oxadiazoles containing an amino-protected group; and

20

10

(c) deprotecting the amino-protected group to obtain oxadiazole a combinatorial library of two or more oxadiazole amine compounds.

25

14. The method of claim 13, further comprising step (d), reacting the oxadiazole amine compounds with one or more carboxylic acid, sulfonyl chloride, isocyanate or isothiocyanate containing compounds to obtain a combinatorial library of two or more oxadiazole compounds.

30

35

15. A method for preparing the combinatorial library of claim 9, comprising:

40

25

(a) reacting one or more resin-bound amines with one or more nitrile-containing carboxylic acids, nitrile-containing isocyanates or nitrile-containing radicals with a leaving group to obtain two or more resin-bound nitriles;

45

(b) cyclizing the nitriles to obtain oxadiazoles containing a leaving group; and

50

30

(c) reacting the leaving group with a primary amine or secondary amine to obtain a

55

5

235

combinatorial library of two or more
oxadiazole secondary amine or oxadiazole
tertiary amine compounds.

10

16. The method of claim 15, further comprising
5 step (d), reacting the secondary oxadiazole amine
compounds with one or more carboxylic acid, sulfonyl
15 chloride, isocyanate or isothiocyanate containing
compounds to obtain a combinatorial library of two or
more oxadiazole compounds.

20

10 17. The method of claim 15, wherein the resin-
bound amine is prepared by displacing a resin-bound
leaving group with a primary amine.

25

18. The method of claim 15, wherein the resin-
bound amine is prepared by reducing a resin-bound imine
15 formed from either a resin-bound aldehyde with a primary
amine or a resin-bound primary amine with an aldehyde.

30

19. A method for preparing the combinatorial
library of claim 9, comprising:

35

(a) reacting one or more resin-bound leaving
20 groups with one or more nitrile-containing
phenoxide ions or amines to obtain two or
more resin-bound nitriles;

40

(b) cyclizing the nitriles to obtain
oxadiazoles containing an amino-protected
25 group; and

45

(c) deprotecting the amino-protected group to
obtain a combinatorial library of two or
more oxadiazole compounds.

50

55

5

236

10

20. The method of claim 19, further comprising step (d), reacting the oxadiazole amine compounds with one or more carboxylic acid, sulfonyl chloride, isocyanate or isothiocyanate containing compounds to obtain a combinatorial library of two or more oxadiazole compounds.

15

21. A method for preparing the combinatorial library of claim 9, comprising:

20

10

(a) reacting one or more resin-bound leaving groups with one or more nitrile-containing phenoxide ions or amines to obtain two or more resin-bound nitriles;

25

(b) cyclizing the nitriles to obtain oxadiazoles containing a leaving group; and

30

15

(c) reacting the leaving group with a primary amine or secondary amine to obtain a combinatorial library of two or more oxadiazole secondary amines or oxadiazole tertiary amines.

35

20

22. The method of claim 21, further comprising step (d), reacting the secondary oxadiazole amine compounds with one or more carboxylic acid, sulfonyl chloride, isocyanate or an isothiocyanate containing compounds to obtain a combinatorial library of two or more oxadiazole compounds.

40

25

45

23. A method for preparing the combinatorial library of claim 9, comprising:

50

(a) reducing an imine formed between one or more resin-bound aldehydes and one or more

55

5

237

amines containing a protected carboxylic acid to obtain two or more protected carboxylic acids bound to resin;

10

5

(b) deprotecting the protected carboxylic acids to obtain resin bound carboxylic acids; and

15

(c) reacting the resin bound carboxylic acids with one or more amidoxime containing compounds to obtain a combinatorial library of two or more oxadiazole compounds.

20

10 24. A method for preparing the combinatorial library of claim 9, comprising:

25

(a) reacting one or more resin-bound alcohols with one or more amines containing a protected carboxylic acid to obtain two or more protected carboxylic acids bound to resin through a carbamate linkage;

15

30

(b) deprotecting the resin-bound protected carboxylic acids to obtain resin bound carboxylic acids; and

35

20

(c) reacting the resin-bound carboxylic acids with one or more amidoxime containing compounds to obtain a combinatorial library of two or more oxadiazole compounds.

AMENDED CLAIMS

[received by the International Bureau on 31 March 2000 (31.03.00);
original claim 1 amended; new claims 25-27 added; remaining claims unchanged (11 pages)]

1. A single compound of the structure:

Formula (I)

wherein:

T, U and V are independently selected from an oxygen, sulfur or nitrogen atom, provided that at least two of T, U and V are a nitrogen atom;

X₁ is selected from the group consisting of
-NHC(O)NR₁R₂, -CO₂R₁, -OR₁, -NR₁R₂, -C(O)NR₁R₂, and
-CH₂NR₁R₂, wherein R₁ is a hydrogen atom or a functionalized resin, and R₂ is a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₂ to C₇ alkenyl, C₂ to C₇ substituted alkenyl, phenyl, substituted phenyl, naphthyl, substituted naphthyl, C₇ to C₁₂ phenylalkyl, C₁ to C₁₂ substituted phenylalkyl, heteroaryl, substituted heteroaryl, heterocycle, substituted heterocycle, the formulae:

5

25. A single compound of the structure:

10

Formula (I)

15

wherein:

20

5 T, U and V are independently selected from an oxygen, sulfur or nitrogen atom, provided that at least two of T, U and V are a nitrogen atom;

25

X₁ is selected from the group consisting of H, -NHC(O)NR₁R₂, -CO₂R₁, -OR₁, -NR₁R₂, -C(O)NR₁R₂, and -CH₂NR₁R₂, wherein R₁ is a hydrogen atom or a functionalized resin, and R₂ is a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₂ to C₇ alkenyl, C₂ to C₇ substituted alkenyl, phenyl, substituted phenyl, naphthyl, substituted naphthyl, C₇ to C₁₂ phenylalkyl, C₁ to C₁₂ substituted phenylalkyl, heteroaryl, substituted heteroaryl, heterocycle, substituted heterocycle, the formulae:

30

35

40

45

50

55

60

wherein Q is a hydrogen atom or functionalized resin;

X₂ is selected from the group consisting of C₁ to C₁₂ alkylene, C₁ to C₁₂ substituted alkylene, C₂ to C₇ alkenylene, C₂ to C₇ substituted alkenylene, C₂ to C₇ alkynylene, C₃ to C₇ cycloalkylene, C₃ to C₇ substituted cycloalkylene, C₃ to C₇ cycloalkenylene, C₃ to C₇ substituted cycloalkenylene, phenylene, substituted phenylene, naphthylene, substituted naphthylene, C₇ to C₁₂ phenylalkylene, C₇ to C₁₂ substituted phenylalkylene,

the formula:

AMENDED SHEET (ARTICLE 19)

5

10

wherein m and n are integers independently selected from 0 to 6, provided that m and n are not together 0; and G is selected from phenylene and substituted phenylene,

5

15

the formula:

30

15

35

20

40

25

45

wherein m and n are integers independently selected from 0 to 6, provided that m and n are not together 0; and R₃ is selected from the group consisting of a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₁ to C₇ acyl, C₁ to C₇ substituted acyl, C₁ to C₄ alkyl sulfonyl, C₁ to C₄ substituted alkyl sulfonyl, phenylsulfonyl, substituted phenylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁ to C₆ substituted alkylaminocarbonyl, phenylaminocarbonyl, substituted phenylaminocarbonyl, C₁ to C₆ alkylaminothiocarbonyl, C₁ to C₆ substituted alkylaminothiocarbonyl, phenylaminothiocarbonyl, substituted phenylaminothiocarbonyl, C₁ to C₇ alkoxycarbonyl, C₁ to C₇ substituted alkoxycarbonyl, phenoxycarbonyl and substituted phenoxycarbonyl,

50

55

AMENDED SHEET (ARTICLE 19)

the formula:

wherein n is an integer selected from 0 to 6;

R₄ and R₅ are together or independently a

hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆

substituted alkyl, C₂ to C₇ alkenyl, C₂ to C₇

alkynyl, C₂ to C₇ substituted alkenyl, C₂ to

C₇ substituted alkynyl, C₁ to C₇ acyl, C₁ to C₇

substituted acyl, C₃ to C₇ cycloalkyl, C₃ to

C₇ substituted cycloalkyl, C₃ to C₇

cycloalkenyl, C₃ to C₇ substituted

cycloalkenyl, a heterocyclic ring,

substituted heterocyclic ring, heteroaryl,

substituted heteroaryl, C₇ to C₁₂ phenylalkyl,

C₇ to C₁₂ substituted phenylalkyl, C₇ to C₁₂

phenylalkoxy, C₇ to C₁₂ substituted

phenylalkoxy, phenyl, substituted phenyl,

naphthyl, substituted naphthyl, cyclic C₂ to

C₇ alkylene, substituted cyclic C₂ to C₇

alkylene, cyclic C₂ to C₇ heteroalkylene,

substituted cyclic C₂ to C₇ heteroalkylene,

carboxy, protected carboxy, hydroxymethyl and

protected hydroxymethyl; and G is selected

from phenylene and substituted phenylene, and

5

the formula:

10

15

5

20

wherein J and K are each selected from the group consisting of phenylene and substituted phenylene, and m and n are independently selected from 0 and 1, and

the formulae (IV) and (V):

25

30

; and

35

10 X₃ is absent or is selected from the group consisting of the formula:

40

45

wherein:

50

15

R₄ and R₅ are together or independently selected from the group consisting of a hydrogen atom, C₁ to C₆ alkyl, C₂ to C₇ alkenyl, C₃ to C₇ alkynyl, C₁ to C₆ substituted

5 wherein R₆ is selected from the group
consisting of a hydrogen atom, amino, amino-
protecting group, -NR₇R₈, carboxy, carboxy-
protecting group, -C(O)NR₇R₈, wherein R₇ and
R₈ are independently selected from a hydrogen
atom, C₁ to C₆ alkyl, C₁ to C₆ substituted
alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂
substituted phenylalkyl, C₁ to C₇ acyl, C₁ to
C₇ substituted acyl, phenylsulfonyl,
substituted phenylsulfonyl, C₁ to C₄
alkylsulfonyl, C₁ to C₄ substituted
alkylsulfonyl, C₁ to C₆ alkylaminocarbonyl, C₁
to C₆ substituted alkylaminocarbonyl,
phenylaminocarbonyl, substituted
phenylaminocarbonyl, C₁ to C₆
alkylaminothiocarbonyl, C₁ to C₆ substituted
alkylaminothiocarbonyl,
phenylaminothiocarbonyl and substituted
phenylaminothiocarbonyl; and m and n are
independently selected from 0, 1, 2, 3 and 4;
and

the formulae (VII) to (XIII):

wherein q is 1 or 2; r is 0 or 1; s and t are independently selected from 0, 1 or 2; and R₇ and R₈ are independently selected from a hydrogen atom, C₁ to C₆ alkyl, C₁ to C₆ substituted alkyl, C₇ to C₁₂ phenylalkyl, C₇ to C₁₂ substituted phenylalkyl, C₁ to C₇ acyl,

INTERNATIONAL SEARCH REPORT

International application No.
PCT/US99/25331

A. CLASSIFICATION OF SUBJECT MATTER

IPC(6) :A61K 31/075, 31/10; C07D 9/62, 27/06, 27/10
US CL :435/ 6, 7.1; 530/333, 334; 548/119, 131, 132, 133

According to International Patent Classification (IPC) or to both national classification and IPC

B. FIELDS SEARCHED

Minimum documentation searched (classification system followed by classification symbols)

U.S. : 435/ 6, 7.1; 530/333, 334; 548/119, 131, 132, 133

Documentation searched other than minimum documentation to the extent that such documents are included in the fields searched

Electronic data base consulted during the international search (name of data base and, where practicable, search terms used)
CAS ONLINE, FILE REG, USPATFUL

C. DOCUMENTS CONSIDERED TO BE RELEVANT

Category*	Citation of document, with indication, where appropriate, of the relevant passages	Relevant to claim No.
X - Y	US 4,929,628 A (MCARTHUR et al) 29 May 1990, see entire document.	1-12 ----- 13-24
X - Y	US 5,242,890 A (CHO et al.) 07 September 1993, see entire document.	1-12 ----- 13-24
Y	GORDON et al. Applications of Combinatorial Technologies to Drug Discovery. 2. Combinatorial Organic Syntheses, Library Screening Strategies, and Future Directions. J. Med. Chem. 13 May 1994, Vol. 37, No. 10, pages 1385-1401, see entire article, especially page 1386.	13-24

☒ Further documents are listed in the continuation of Box C.☐ See patent family annex.

* Special categories of cited documents:

A document defining the general state of the art which is not considered to be of particular relevance

B earlier document published on or after the international filing date

L document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)

O document referring to an oral disclosure, use, exhibition or other means

P document published prior to the international filing date but later than the priority date claimed

T later document published after the international filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

X document of particular relevance, the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

Y document of particular relevance, the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art

A document member of the same patent family
